Telecom Trading 快訊貿易 wholly owned by **TELECOM TRADING LIMITED**

Company Profile

Telecom Trading Limited is a Hong Kong holding company whose registered offices are located in Kwai Chung. The company specialises in the trading of smartphones. The company directors hail from the United Kingdom and have over twenty-five years' experience of the mobile telecommunications marketplace, the last eighteen of which have been spent in Hong Kong. The company trades all of the major phone brands and is easily able to access the Chinese and South East Asian marketplaces from its Hong Kong headquarters.

"With eighteen years' experience of trading from within the region, we at Telecom Trading believe that an open and equitable approach to trade is the key to any successful business partnership. If your company shares the same philosophy, then we would be delighted to be your mobile phone partner in China and throughout South East Asia."

Richard Ewart, Director

公司介紹

快訊貿易為一間香港控股公司其辦事處位於葵涌。公司主要業務為各大品牌智能手機的貿易。公司董事來自英國，擁有超過25年的移動通訊市場經驗，以香港為最近18年的基地。藉著公司總部位於香港的優勢，可以比較容易接通中國及東南亞地區的市場。

「基於18年來在區內的貿易經驗，我們快訊貿易深信成功的商貿關係是建基於坦誠及公正的合作。如果貴公司的貿易理念與我們一致，我們很樂意成為貴公司在中國及東南亞地區的合作伙伴。」

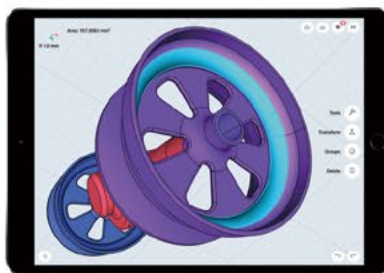

Richard Ewart, 董事

Android will be a good choice in 2019

Through many years, the Android OS has acquired major percent of global market share with more and more efforts.

A number of enterprises have been adopting Android . To be an open source platform for mobile devices offering scalability, speed and performance, Android has many advantages of application development . Android will be a good choice in 2019.

Easy to adopt

Android apps are developed in Java programming language which is one of the most trusted languages used to develop applications. Any developer with practical knowledge of Java can build android application efficiently. It is surveyed that Java developers prefer developing android apps due to the easy scripting and coding on android OS.

Open Source

The Android platform (SDK) is open source, freely available platform hence it reduces the software licensing costs which adds on to the low investment and high ROI. Android community allows developers to interact with the Android

Developer community in case of issues or future version. These benefits make Android gives a huge profit to the enterprises. Android applications would reach huge/ wide range of users.

Customized User Interface

One of the catchy features in android that the developers look into is the customizable user interfaces. Android applications are highly customizable and easy to manage. Enterprises can create customised applications and add on features that would add value to the application.

Developing customised application in android offers plenty of customization options. Enterprise targets and requirements can be effectively addressed with this platform. Android is a robust OS that can integrate all types of modifications or changes that needs to be added to the application at any point of the development cycle or for future enhancements.

High end solutions and features

Android apps can be customised as per the target audiences. The advantage of android. One of the advantages of android platform is its global

presence. In case features need to be developed for specific users, Android tools and technological advancements allows android developers to build custom apps using android platform. High-end app solutions can also be developed with

integration of flourishing technologies like AR and VR . Android offers a wide scope for innovation and opens the doors to new business opportunities.

Android is An Evolving Platform

Android smartphones are built by several renowned companies and are being used by a wide range of users all over the globe. Google keep updating new features and releasing new versions to stay firm amid growing competition. Features like mobile payments, NFC and HD displays were introduced in Android OS.

Single Application to manage business processes

Enterprises have multiple departments or entities under themselves, Hence having a single application to manage all the processes would be a great advantage to the management. Android is a perfect platform as it can be used on a wide range of devices and variety of factors.

Multiple Sales Channels

Android allows to deploy applications in different ways. Android apps can either be published in Google play store, Own sales and

distribution channel, distribute through APKs or any other third party marketplaces. This makes the app reach to wider audience. Reaching a wide range of audiences or target audiences would boost the overall value or purpose of the application.

Customer Feedback

Developing Android mobile app for enterprises is a best way to receive and respond to customer feedback. It would also help in keeping the end users updated in case of any new versions of the application.

Faster Time To Market

It is important to launch an app as soon as possible to beat with the competition. Android development tools facilitate faster development and integration of the desired features. Android developers can build an app in a shorter duration of time which in turn would add value to businesses. Rapid development and faster launch to the market.

Android version upgrades, security and enhancements

Android updates are being rolled out by Google which makes the platform more firm with every upgrade. In every update of android there are security and feature enhancements. The automated system sends notifications in case of any version update or app update.

The Stylish LG K11+ Arrives in Hong Kong Available in Two Colors, Sporting IPS HD Display and DTS:X Best-in-class audiovisual and camera features promise high performance at a light cost

LG Electronics (LG) has been offering a wide range of handsets to cater to the needs of different users. Today, the company introduces the K11+, available in Moroccan Blue and Terra Gold, to Hong Kong. As a new member of the K series that was launched at the Mobile World Congress 2018 (MWC 2018) earlier this year, users can now enjoy flagship-level audiovisual experiences with a handset that boasts a high performance to cost ratio.

Embark on an immersive journey with the IPS HD display and DTS:X

The new LG K11+ is equipped with a 5.3-inch IPS HD display that presents delicate and realistic images. With its Comfort View feature that reduces blue light emissions and helps relieve eye strain, the new handset is most suited for mobile gamers and drama fans. Committed in bringing the ultimate multimedia experience to users, LG also added its unique DTS: X feature to bring the mind-blowing 3D virtual surround sound to the K11+. No matter listening to songs, watching films or playing mobile games, users can enjoy the impressive and lifelike audio effect on-the-go as if surrounded by seven speakers.

Innovative and practical camera features provide extraordinary shooting experience

Want to stand out from the sea of social media content to attract more "Likes"? A smartphone equipped with multiple shooting features is what users need to win the social

media war. The new Phase Detection Auto Focus (PDAF) makes the camera on the LG K11+ 23% faster than the conventional auto focus, capturing every splendid moment that fleets quickly with just a touch of a button. This new feature makes the shooting experience easier and faster than ever. Users only need to quickly press the volume down button twice to turn on the camera even in standby mode. To conveniently take selfies, users can place their finger on the fingerprint sensor, or simply raise an open hand in front of the camera lens and then clench it into a fist for three seconds. What's more, closing one's hand twice automatically turns on the Gesture Interval Shot mode where four consecutive photos will be taken in just two seconds.

The LG K11+ comes with the latest Portrait Mode, together with Flash for Selfie and automatic face detection, which means that taking professional photos with slight depth of field (DOF) is now easier than ever. In addition, the Beauty Mode is designed to soften users' complexion and brightens their skin to give a more glamorous look. The premium 8MP front camera and 13MP auto focus rear camera of the K11+ also guarantees high-quality photos. Active social media users can also show their creativity with the help of the new Flash Jump Shot. This innovative feature allows users to create interesting GIFs to share with family and friends on multiple social media platforms.

A first-class mobile experience with stylish metal design and thoughtful features

Thanks to its metallic and curved body with 2.5D Arc Glass design and a smooth back cover, the LG K11+ is both comfortable to hold and aesthetically pleasing to look at. The handset is equipped with three card slots to support dual SIM cards and MicroSD cards. In addition, the handset has passed eight MIL-STD tests designed by the United States military to evaluate the performance of equipment in harsh environments, which includes high temperatures, low temperatures, shock, drop and humidity. The K11+'s extraordinary durability allows users to safely enjoy the premium smartphone experience while users continue on with the everyday challenges in their busy lives.

Samsung Galaxy A8s: The First Smartphone with Groundbreaking Design Infinity-O Display

Samsung Electronics H.K. Co. Ltd. launched the Galaxy A8s, the first smartphone with Infinity-O Display, offering unprecedented boundless viewing experience to users. The Galaxy A8s comes with a 6.4-inch 19.5:9 high screen-to-body ratio, a mere thickness of 7.4mm, as well as a triple rear camera, and powerful and efficient performance, setting a new industry benchmark for mid-tier smartphones.

"As the leader who innovates the global smartphone industry, Samsung understands consumers are demanding more from technology nowadays. Backed by our outstanding research and development of innovative technologies for smartphones, we are very delighted to introduce another revolutionary product to the Galaxy A series – Galaxy A8s – and unleash brand new design possibilities for the industry. The groundbreaking ultra-high screen-to-body ratio offers a unique user experience," said Yiyin Zhao, Managing Director of Hong Kong.

Momentous Infinity-O Display Design Offers Boundless Viewing Enjoyment

The Galaxy A8s is the first-ever Samsung smartphone to deploy Infinity-O Display technology, which offers users a more immersive and expansive viewing experience. The front camera is uniquely placed at the top left corner of the display, and the screen-to-body ratio is raised sharply to 19.5:9, further enhancing the boundless viewing enjoyment. In addition, for a more user-friendly Infinity-O Display, touchscreen function is added to the front camera. Users just need to swipe towards the right bottom corner to quickly launch the camera. A light serves as a reminder when users switch to front camera or use the selfie camera timer.

The Galaxy A8s comes with a 6.4-inch Full HD+ display and a thin body measuring at only 7.4mm, which is thinner than most mid-tier smartphones in the market. The sleek and ergonomic body offers a natural and comfortable grip as users explore the joys of life. The Galaxy A8s comes in Black, Blue and Gradation Black, while the main camera has different camera deco rings to

match the body. The stylish design perfectly suits energetic users and the 3D back glass with gradient colors also flawlessly cater to the preference of young users.

Powerful Triple Camera Captures the World You See

Samsung once again equips a mid-tier smartphone with the triple camera, helping users of the Galaxy A8s capture the real world anytime, anywhere. The 24MP main camera with F1.7 wide aperture allows users to take stunning photos, whether it's in bright environments in the daytime, or lowlight environments at night. The telephoto camera with 10MP, F2.4 aperture and 2X optical zoom allows users to take crisp and clear shots even from a far distance. And the depth camera with 5MP, F2.2 and Live Focus functions enables users to take gorgeous portraits and accentuate the pictures' subjects with real-time or post depth of field adjustment.

The Galaxy A8s is equipped with various camera functions powered by artificial intelligence, which help users take outstanding photos. The Scene Optimizer can automatically identify 20 kinds of scenes, including flower, person, food, sunset or sunrise, animals and more; also, it can optimize the saturation, white balance and brightness of photos. Flaw Detection can spot the four most common problems, such as eye blink, lens smudge, motion blur and back light, and notify the user to retake the picture, ensuring not a fantastic moment will be missed. Bixby Vision can identify six modes of surroundings, such as text, shopping, image, place and more, and provides the most useful of these information to users.

The front camera of 24MP, together with Smart Selfie Expression, enables users to take high-quality photos even in bright daylight or lowlight environments – the camera will raise the brightness automatically and reduce the noise to create bright and sharp selfies. The built-in Smart Beauty and Pro Lighting features, together with Selfie Focus, assist users to take excellent photos with ease. The Galaxy A8s also supports AR Emoji, AR stickers, stamps and filters to add more fun and creativity to photos.

From Work to Daily Life, Delivering Excellent Performance

The Galaxy A8s is equipped with Snapdragon 710 processor, with built-in 6GB RAM to ensure high efficiency and performance. The Galaxy A8s comes in a bezel-less design and a full screen. The App Pair feature helps users manage two apps simultaneously and conveniently. Samsung also offers the intelligent assistant Bixby to assist daily lives of users and remind them of their daily schedule. At the same time, the built-in Dual Messenger enables the convenient use of two different accounts in the same messaging tool, perfectly separating messages from work and personal life. Samsung also provides Secure Folder to create a high level of security and encrypted space for storing files and apps, as well as facial and fingerprint authentication, ensuring the smartphone's security and privacy.

➤ **NEC demonstrates 5G face recognition system**

NEC has completed a proof-of-concept demonstration of a 5G-based facial recognition system that can be temporarily deployed at event venues without the need for new cable installation.

The prototype system was tested at NTT Docomo's 5G Open Lab in Okinawa as part of the operator's 5G Open Partner Program, which seeks to encourage the creation of new 5G use cases.

The system utilizes 5G and mobile edge computing (MEC) technologies to enable instant face recognition using mobile networks.

In order to optimize bandwidth, monitoring cameras can stream low definition images when people are not detected, and high definition images when certain behaviors are detected.

The demo system consists of NEC's face recognition AI engine NeoFace, Image Analysis and Behavior Detection System and Context-aware Service Controller solutions. They are installed on MEC servers and connected through a virtualized evolved packet core.

"NEC will continue to develop and offer a variety of solutions as a top vendor of domestic mobile core networks in the 5G era and to contribute to the expansion of the DOCOMO 5G Open Partner Program, while taking advantage of our experience and knowhow," NEC GM for network solutions Kazuhiro Tagawa said.

➤ **Smartphone to drive \$8.2b VR games market by 2023**

New research forecasts that mobile VR will account for over 55% of total VR games revenues by 2023. The report by Juniper Research forecasts revenues from VR-specific games to reach \$8.2 billion by 2023, rising from an expected \$1.2 billion in 2019.

Smartphone-based VR headsets accounted for 73.6% of total device shipments in 2018, dwarfing all other including standalone (10.1%), console (8.3%) and PC (8.0%), the report estimates.

It argued that the development of smartphone VR content is essential to increase consumer confidence in VR across all platforms, following a disappointing year of hardware sales in 2018. It also forecasts that over 100 million mobile VR devices, including smartphone and standalone headsets, will access games globally by 2023; rising from 52 million devices in 2019.

The researcher argued that low-cost mobile VR content is needed to initially engage users and encourage them to other VR platforms.

Mobile VR to rule by 2023

Research author Sam Barker explained: "Revenues from VR-specific mobile games will exceed \$4.6 billion by 2023, however average revenue per mobile VR games user will be the lowest of all VR platforms. In response, app developers must mitigate high app abandonment rates by providing engaging and continually-updated content".

Juniper forecasts that more than 50% of mobile VR games accessed in 2019 will not be monetized due to the difficulty of implementing advertising in VR content without impeding the user experience. In response, app developers must leverage in-app purchases to recover this shortfall in potential advertising revenue.

Content trumps hardware by 2023

The Juniper whitepaper: The Roadmap for Future VR Success says revenue from hardware sales will generate the majority of revenues throughout the forecast period. However, the lack of content creation in the market will continue to plague the industry; if this trend continues then the value proposition of a headset will only diminish.

The research reasoned that sustaining the growth of VR hardware sales will only be achieved by creating a profitable VR content market. Juniper has identified 2023 as the year in which VR content revenues, including games, multimedia, gambling and others, will surpass hardware revenues for the first time.

It recommended that VR headset vendors now focus on increasing their VR content libraries through app store partnerships to capitalize on the anticipated growth of VR users.

CES 2019 hailed as "the dawn of 5G"

The transformative potential of 5G was a hot topic throughout last week's CES trade show in Las Vegas, with digital advisory and business development company MediaLink's CEO Michael Kassan labelling this year's

show "the dawn of 5G."

During a panel discussion at the event, Kassan was joined onstage by AT&T CEO John Donavan, who detailed the US operator's efforts to transform 5G into a reality, as well as AT&T's work to develop the first 5G-enabled hospital in Chicago.

"This network, really simply stated, is not just faster and more efficient – which we've grown to appreciate – it's a real-time network. So it's a game-changer," Donovan said.

Another area of focus was the potential for 5G to transform the automotive sector, including by significantly reducing accidents through self-driving vehicles. According to research cited at the event, self-driving vehicles have the potential to eliminate 94% of car accidents caused by human error.

During a panel session on the connected car with 5G, executives from BlackBerry Certicom, Renault-Nissan-Mitsubishi, TomTom and Flex explored how 5G will transform future cars into a private data center, fueling innovation in areas including smart cities, autonomous vehicles, mobility and privacy protection.

A separate session concentrated on the effects 5G and the IoT – including smart homes – will have on the retail sector, and how shopping will be affected by the emergence of the technology.

The impact of 5G and VR on the entertainment industry was another area of focus at the four-day event, including the potential of these technologies to allow immersive experiences at public events such as sports games.

KDDI, Samsung complete 5G surveillance video trial

Samsung Electronics and KDDI are wasting no time adapting 5G to trains in Japan. The two have completed a test using 28 GHz to transmit 4K ultra-high-definition (UHD) surveillance video on a train platform in Tokyo.

The demonstration was conducted between Nov. 21 and Dec. 21 at the Haneda Airport International Terminal in Ota, Tokyo. Along with Waseda University, Keihin Corporation and Advanced Telecommunications Research Institute International (ATR), Samsung said it was able to demonstrate effective communications through 4K UHD video using a 5G base station.

It's certainly not the first time these two have conducted 5G demos on trains. Last year, KDDI and Samsung showed how they were able to download an 8K video via the CPE installed onboard a moving train.

This latest feat demonstrates how 5G can be used to increase train passenger safety. The companies say that collecting and analyzing 4K UHD videos in real time will remove some of the burdens from the staff in charge of constantly monitoring footage. It also helps them in detecting dangers in advance and improving overall safety.

During the demonstration, the video files collected from both 4K security cameras and security robots

patrolling the station were sent via tablets using 5G, according to a press release. The files were then received by the base station to be displayed on the monitor and virtual reality (VR) goggles in the monitoring room. Detecting any suspicious people or objects at the station was made possible through collecting and analyzing the received 4K files shown on the server.

The demo used Samsung's 5G solution, and KDDI was responsible for assessing and designing the 5G test environment at the train station, which was provided by Keikyu. Waseda University provided the monitoring system, VR goggles and video evaluation.

Separately, another 5G demo involving KDDI and Samsung was conducted at an elementary school, where they compared the differences between 5G tablets and Wi-Fi tablets in their ability to download and play back videos.

A gym at Maehara Elementary School in Tokyo was set up with Samsung's 5G network at 28 GHz to enable UHD videos. They also worked with the ATR.

The students were given a chance to create their own videos and experience high-speed and large capacity transmission of large video files. At the same time, they verified the capabilities of 5G for this type of use case. KDDI was responsible for assessing and designing the 5G areas used in the trial, and ATR provided the testing infrastructure.

Ericsson to take \$685m writedown for Q4

Ericsson will take a 6.1 billion kronor (\$685.2 million) impairment charge for the fourth quarter, with more than half of this related to restructuring charges.

The Swedish vendor will take the charge to reduce losses at its BSS business, which the company said "is not showing satisfactory progress" as part of the company's turnaround efforts.

The poor performance of the BSS unit is jeopardizing the vendor's digital services segment's overall profitability target for 2020.

Ericsson said anticipated customer demand for a full-stack pre-integrated BSS solution has not materialized, and delays in product and feature development have reduced the competitiveness of its Revenue Man-

ger solution.

As a result, the company has embarked on a revised BSS strategy that will include increased investments in its Ericsson Digital BSS platform.

Ericsson has now decided to pursue additional measures including job cuts, and said it expects further charges of around 1.5 billion kronor in 2019.

The provisions will mainly relate to costs associated with expected changes in project scopes including customer compensation payments, provisions for project delays, and write-down of intangible assets.

Shares in Ericsson fell 3.88% yesterday to 78.30 kronor in the wake of the announcement, as the market reacted negatively to the expected impact on operating profit.
