D&B DUNS REGISTERED™
WITH TOP RATING

The iPhone's biggest rival may have one advantage in Trump's tariff war

There's a key difference between an iPhone and Samsung Galaxy phone that may matter now more than ever: One was likely assembled in China, while the other was probably produced in Vietnam, India or South Korea.

Samsung, unlike Apple, doesn't rely heavily on China for smartphone production, a detail that's become increasingly relevant as the United States and China have been engaged in a tit-for-tat trade war that's resulted in tariffs on Chinese imports of at least 145% with some exceptions. While Apple has shifted some production to other regions like India, April estimates from Wedbush Securities indicate 90% of iPhone production is still in China.

Smartphones and select other tech devices and parts fall under Trump's exceptions to reciprocal tariffs, which was viewed as a reprieve for Apple and other phone makers. But the administration also promises that a different bucket of tariffs targeted specifically at semiconductors – the components that power electronics – are coming soon.

Samsung, the world's largest smartphone maker by market share by some analyst estimates, certainly isn't immune from tariffs or the economic impact they may bring. But it also doesn't depend on a country that's been the biggest target of Trump's tariff offensive to produce its smartphones, meaning it may not have to upend its mobile device operations in a major way, should tariffs on smartphones from China send prices skyrocketing.

"The advantage is, yes, that they're not facing the whatever crazy number we are currently dealing with," said Gerrit Schneemann, a senior analyst for Counterpoint Research covering the smartphone industry.

But that doesn't mean that Samsung will gain an immediate advantage, Schneemann added.

"At the same time, there's not a direct line to turning that into just an exponential boost in sales," he said.

Trump's tariffs on China could roil the tech industry

The tech industry relies on China's vast network of component suppliers and assembly facilities to mass produce consumer devices like smartphones, laptops and monitors. Some of those devices are exempt from reciprocal tariffs, but many gadgets aren't, including video game consoles and earbuds.

Trade tensions between the two economic powerhouses ratcheted up again on Monday when Beijing threatened reciprocal measures against any country that restricts trade with China to appease the United States. Earlier this month, the Trump administration issued a 90-day pause in reciprocal tariffs against most countries except China.

Analysts at Wedbush Securities, led by managing director Dan Ives, wrote in an April 20 note that negotiations with China need to happen "ASAP" for the sake of "the markets, tech world, and US economy."

"Otherwise this tariff and trade war will inflict major damage to growth while increasing inflation... and leaving the tech world with many questions and no answers to plan their future strategy," the note reads.

Apple, given its dependence on China, has been a central focus of the tech industry's tariff woes, with analysts from UBS estimating the price of an iPhone 16 Pro Max assembled in China could skyrocket by \$800. That estimate was made prior to Trump saying that smartphones are exempt from reciprocal tariffs. Just 5% of iPhones are made in Vietnam and India, while another 5% are produced in other countries, according to Wedbush.

The situation is much different for Samsung, which closed its last phone factory in China in 2019 after losing market share to domestic rivals in the country, though it still has other operations there. Sources within Samsung told CNN that the vast majority of its smartphone manufacturing takes place in South Korea, Vietnam, India and Brazil.

That lines up with figures from analysts, as Counterpoint Research estimates 90% of Samsung's smartphone production is in Vietnam. The International Data Corporation, a market research firm, estimated that roughly 50-60% of Samsung's smartphone production is based in Vietnam, while India is the company's second largest phone production hub, with South Korea and Latin America largely making up the rest.

Samsung opened what it called "the world's largest mobile factory" in India in 2018 and was the largest exporter of smartphones from India in 2024, according to Counterpoint Research, though Apple also has a large presence, with both companies accounting for about 94% of the country's smartphone exports.

Samsung could also benefit from its dual role as both a seller of consumer electronics and a manufacturer of components like displays, memory and chips, according to Ben Barringer, a global technology analyst for investment management firm Quilter Cheviot.

"Samsung probably has a bit of an advantage in the sense that Samsung is one of the few companies in the world that's vertically integrated," said Barringer.

A 'mixed bag' for Samsung

Still, some analysts are skeptical that Samsung's diversified manufacturing will lead to a boost in sales. Apple

customers can be fiercely loyal, and it's unclear whether price hikes would change that.

"People just aren't necessarily switching away from Apple to Samsung in general," said Schneemann.

Linda Sui, senior director of global smartphone strategies for analysis firm TechInsights, also believes Apple will be able to shift production of iPhones destined for the US market to India. The company had reportedly been ramping up iPhone shipments from India to the United States, according to reports from The Financial Times and The Times of India.

Apple and Samsung also cater to different types of smartphone buyers. Apple is known for selling just a few iPhone models, virtually all of them premium devices with higher margins. Samsung, on the other hand, generally sells a wider variety of phones – particularly at the lower end of the price spectrum with its line of Galaxy A series phones, which Schneemann says are Samsung's "volume drivers."

"For Samsung, it's a mixed bag," he said, as Apple dominates the higher end of the market.

Trump's tariffs are part of a broader effort to bring manufacturing back to the United States, meaning other nations — including Vietnam and India — also face levies, albeit lower ones of 10% for now, which means Samsung is still likely to be affected by tariffs in some capacity.

But the larger concern is whether the state of the economy could impact consumer spending, possibly dampening demand for smartphones as Trump's tariffs could potentially raise prices on everything from toys to groceries.

That could push consumers to hold onto their devices for longer periods of time, particularly in mature smartphone markets like the United States, where premium phones tend to be popular, said Schneemann. Demand in emerging markets, where smartphone shipments have seen more growth, could also slow if consumers "feel the pinch," he said.

"Daily necessities and essentials are going to be higher on the list than maybe a new or upgraded smartphone," Schneemann said.

Sony Introduces its Latest Flagship Smartphone Xperia 1 VII

Sony announced its flagship smartphone Xperia 1 VII, designed in collaboration with the engineers of its 'α™' (Alpha™) digital cameras, 'Walkman®' portable audio players and 'BRAVIA™' televisions, and incorporating cutting-edge technologies found in these iconic Sony devices. AI technologies, cultivated within these various fields, have now been optimised for Xperia™ as 'Xperia Intelligence', enhancing the experience of its camera capabilities, audio playback, and content viewing. Xperia 1 VII offers a totally new camera experience for smartphones, new innovative features named 'AI Camerawork' and 'Auto Framing' allow you to capture stable and framed composition videos even when you take your eyes off the shooting screen.

A camera feature that allows you to shoot with a stable composition without having to focus on the shooting screen. New features: 'AI Camerawork' and 'Auto Framing'.

The new 'AI Camera Work' feature helps to create pro level stable and framed videos, keeping the subject fixed in the centre of the composition, even in situations where you are walking around while filming a moving subject. This is achieved through powerful image stabilisation and posture estimation technology, ensuring the subject's relative position remains consistent so that professional-looking video is possible for even the most novice camera users.

Additionally, 'Auto Framing' uses AI to track the subject and automatically crops the shot to centre it on the screen. When

filming a moving subject, you can simply point the camera roughly at the shooting subject and it will automatically capture it without you having to chase it yourself. Auto Framing lets you take two types of videos: one showing the whole scene and another cropped focusing on the close-up of the subject.

Ultra wide-angle lens

Xperia 1 VII has three rear cameras that feature a new 16mm ultra wide-angle lens equipped with a larger 48MP 1/1.56-inch sensor, approximately 2.1 times larger than the previous model, allowing for clear night shots equivalent to full-frame cameras, with low noise and wide dynamic range. It has minimal distortion and can also capture close-up shots from about 5cm away for incredible macro photography. The wide-angle lens offers 24mm/48mm (equivalent to 2x optical zoom) and is equipped with the 'Exmor T for mobile' image sensor, which also has excellent low-light performance. Thanks to this excellent image sensor, high-quality footage with bright and clear video is possible even when cropping the image using AI Camerawork and Auto Framing. Additionally, the telephoto lens provides optical zoom from 85mm to 170mm, allowing for high-resolution images of distant subjects.

Xperia's best sound quality to date, inheriting the DNA of Walkman

In addition to a circuit design focused on sound quality, new components proven for their excellence in Walkman devices have been incorporated. This significantly enhances the sound quality when connecting wired headphones, achieving clarity as if listening on a dedicated music player. Furthermore, not only wired but also wireless connection, the high-quality enhancement technology 'DSEE Ultimate™' utilises AI enabling, so even compressed streaming audio sources can be enjoyed with immersive, high-quality sound.

SCAN ME

www.mobilesources.net/sunsmile

The full-stage stereo speakers of Xperia, known for their sound quality, have undergone further adjustments to deliver even clearer sound across the entire frequency range, from high to low.

Display that reproduces BRAVIA's high picture quality according to the viewing environment

To improve the viewing experience under bright conditions, an additional light sensor has been added to the back of the device which enables the adjustment of brightness and colour best suited to the conditions. Whether outdoors under bright sunlight or indoors in dim lighting, it accurately recognises the surrounding brightness and adjusts to the optimal brightness, colour gamut, and colour temperature for the environment. When viewing playback outdoors, the combination of an improved peak brightness display panel and 'Sunlight Vision' that enhances visibility under direct sunlight, provides a comfortable viewing experience.

High performance powered by the latest chipset and a battery that supports two days of active use

Equipped with Qualcomm's latest chipset, the Snapdragon® 8 Elite, the NPU, CPU, and GPU have each been improved by over 40%, meaning fast AI processing is supported during shooting and high-performance gaming environments while reducing battery consumption. Additionally, when "Processing Optimization" is turned on, it achieves up to 10% power savings for specific uses such as social media, web browsing, and online video viewing; enabling up to two days of active use. Furthermore, this device supports up to four OS version upgrades and six years of security updates, allowing for comfortable use over an extended period.

Consideration for the environment and accessibility

Xperia 1 VII includes accessibility features for camera use, such as a function that provides horizontal measurement information on the shooting screen through sound and vibration. The Android 'TalkBack' feature incorporates unique Sony enhancements for ease of use such as reading the menu in order of usage frequency allowing users to quickly access the features they use most often. Additionally, the product box and internal tray use Sony's Original Blended Material, an environmentally conscious paper material, achieving a completely plastic-free packaging solution. Furthermore, approximately 84% of the materials used for some components inside and outside the device include environmentally conscious plastics such as SORPLAS™ which consists of recycled and plant-based resins.

Style Cover with Stand for Xperia 1 VII (XQZ-CBFS)

A dedicated cover for the Xperia 1 VII (sold separately) is also available and comes with a stand cleverly positioned to be usable in both vertical and horizontal orientations. The cover features both a grip and stand, making it easy to hold and provides stable shooting when combined with the included ring strap. The cover is available in three colours that matches the device. Additionally, the dedicated cover uses approximately 78% environmentally conscious resins, including SORPLAS.

Colour and Availability

Xperia 1 VII will be available in Slate Black, Moss Green and Orchid Purple in selected countries from 2nd Quarter 2025.

➤ **Us mobile market: Apple iPhone user engagement slightly loosened, Samsung brand loyalty 76%**

According to market research firm CIRP, Apple's iPhone brand loyalty (brand loyalty) in the U.S. smartphone market is still at the top of the industry, but has declined from 94 percent (2021) to 89 percent (2025). According to the report, there are several factors that may contribute to the decline in Apple's iPhone brand loyalty in the U.S. market. One is that the price of the iPhone has continued to rise in recent years, with the starting price of the iPhone 16 Pro reaching \$999, and many users choosing to extend the life cycle of their devices rather than upgrade them frequently.

The second is that Apple's introduction of the RCS messaging standard in iOS 18, which supports high-definition media transmission and read receipts between iPhone and Android users, may weaken the "lock-in" effect of the ecosystem. Meanwhile, Samsung's user retention rate has rebounded from a low to a record high of about 76%, which the agency attributes in part to LG's exit from the U.S. smartphone market in 2021 and fewer Android competitors. Many Android users are turning to Samsung by default when choosing new devices. It should be noted, however, that the CIRP report does not provide transparency about the source of the data, and lacks details such as sample size and margin of error. The information is for reference only.

➤ **Q12025 China smartphone market shipments grew 9%**

According to the latest report released by TechInsights, shipments in China's smartphone market grew 9 percent year-on-year to 68.7 million units in the first quarter of 2025, marking the fifth consecutive quarter of growth.

The report said there were significant changes in the

ranking of Chinese smartphone vendors this quarter: Huawei Xiaomi led the market with a 20% share, followed by Xiaomi with 19%. Both companies benefited from state subsidies, and their transparent financial systems and relatively streamlined offline distribution structure helped. OPPO (including OnePlus) and vivo ranked third and fourth, with market shares of 16% and 15%, respectively, and shipments were basically flat year-on-year. Glory and Apple performed worse than the overall market level, showing negative growth, ranking fifth and sixth with 13% share respectively.

In addition to the market recovery, the national consumer electronics (3C) subsidy program is the main driver of market growth in the first quarter of 2025, further stimulating the backlog of replacement demand in the market. In addition, market concentration increased during the quarter, with the top six vendors collectively accounting for 96% of shipments, up from 95% a year ago.

➤ **Huawei It has become the number one smartwatch seller in China**

According to data from RunTo Technology (RUNTO), the online market for adult smartwatches is booming in the first quarter of 2025.

Among them, the sales volume reached 2.516 million units, up 45.9% year on year; the sales volume was as high as 3.86 billion yuan, up 51.7% year on year; the average market price was stable at 1,535 yuan.

In terms of brand pattern, the market shows a highly concentrated situation. The TOP5 brands, namely Huawei, Apple, Xiaomi, vivo and Honor, together occupy as high as 80.5% of the market share, which increased by 13.8 percentage points compared with the same period last year.

Huawei With an absolute leading online market share of 37.0%, it relies on its own research and development technology, diversified product layout, and fixed user base, and is consolidating its market position by combining the advantages of Hongmeng ecology and health algorithm.

Apple ranked second in the online market with a 24.0%

share of sales, up more than 60%.

It is worth noting that since the release of Apple Watch Series 10 in September 2024, Apple has not had a new product iteration in the quarter. However, the implementation of the national subsidy policy has become an important driving force for the sales of Apple products, directly driving the growth of its sales

Xiaomi also performed well in sales this quarter, ranking third in the online market with a market share of 13.9%. Xiaomi has always been known for its cost-effective products, which are highly competitive in the market.

In particular, Redmi Watch 5, which is positioned at 500-600 yuan, has been quickly recognized by the market and its sales have risen rapidly since it was launched in the fourth quarter of 2024.

Vivo and Honor moved up and down in the market share rankings for the quarter, ranking fourth and fifth with 3.0% and 2.6% of the market, respectively.

iPhone 16e: A Comprehensive Look at Apple's New Device

Apple are consistently adding to their lineup of mobile phones, and the latest model to join the collection is the iPhone 16e. Positioned as a model that boasts many of the same impressive features as the rest of the iPhone 16 lineup but at a more affordable price point. Starting at just £599, this device is a way to access the latest Apple technology without the premium price tag.

A big selling point of the iPhone 16 is its compatibility with Apple Intelligence – Apple's in-house AI system. Powered by the A18 chip, this allows you to create custom Genmoji, edit photos with Clean Up, and utilise writing tools that can proofread and rewrite text across various apps. This also includes an advanced Siri, which can understand natural language and providing step-by-step instructions.

The camera on the iPhone 16e consists of a wide-angle and 2x telephoto capabilities. This means you can capture high-resolution pictures and 4K videos with features like Night mode, Portrait mode, and Smart HDR 5. The versatility on this camera makes it perfect for a range of situations,

including casual, everyday mobile photography.

2We know that the 16e is supposed to be a more affordable version of the 16, but exactly how many of the core features are you giving up when opting for the cheaper model? While the 16e shares several features with the standard 16 and 16 Plus, such as the A18 chip, Apple Intelligence, and an OLED display, there are some key areas where these phones differ.

For a start, the 16e only has one main camera, as opposed to the dual-camera system seen in the 16, which comes with a 12MP ultrawide lens. This means the 16e doesn't support features like macro photography, Cinematic mode, or Action mode. Both models use the A18 chip, but the 16e includes a 4-core GPU, while the iPhone 16 steps it up with a 5-core GPU for smoother graphics performance, which is especially noticeable in gaming and creative apps.

In terms of design, if you like to express yourself through your phone's colour, the 16 gives you more choices. The 16e comes in classic black and white, whereas the 16 has fun options like ultramarine, teal, and pink. However, the all-new action button seen in the 16 is also on the 16e, allowing you to use AI features, make calls, and launch apps just at the touch of a button.

Motorola Razer 2025 :It's not an Ultra, but it's great

Like its non-folding cousins, the Razer Ultra 2025 is not cheap. It starts at \$1,300, and while it comes in gorgeous colors, it won't be accessible to all customers. Motorola also has two other phones: the middle-of-the-pack Razer Plus and the base Razer 2025.

Both are refreshed versions of the previous generation, but while the Razer Plus has no noticeable changes, the Razer 2025 has a few tweaks that make it that much better. After spending a week with it — and having spent considerable time with the Ultra and previous Razrs — here's why the Razer 2025 is the flip phone for most people.

If you've used any Razer for the past three years, the Razer 2025 will feel instantly familiar. Yet, if you've previously used a Plus, it will feel somewhat limiting thanks to the

smaller front display.

Like last year's Razr 2024, it's designed to offer the quint-essential Razr experience in a no-frills way. This means you get a smaller 3.5-inch Cover Display instead of the full-screen 4-inch one on the Razr Plus and Razr Ultra 2025. It has a peak brightness of 1,700 nits, which is lower than its siblings, and it also lacks Dolby Vision support, but it's essentially the same high-quality display experience.

The size is the only downside, as the Cover Display works the same way as its siblings, and you also get the highly optimized experience that the Razr is known for. Yes, it has a lower refresh rate, but at 90Hz (versus 165Hz on the others), it's not far below the best phones at 120Hz, and better than the 60Hz refresh rate on the Galaxy Z Flip 6.

Unfold the Razr 2025, and you get the same 6.9-inch display found on the Razr Plus, except it's also limited to 120Hz. Once again, this is on par with the best phones. The peak brightness is 3000 nits, lower than its siblings but higher than the Galaxy Z Flip 6. The Razr 2025 may seem like a downgrade on paper, but it nonetheless offers a fantastic display experience.

The Razr 2025 measures 7.3mm thick when unfolded and 15.9mm when folded, but at 188 grams, it's fairly light. The form factor is my favorite for daily usage, especially as the front display provides the ideal experience for regular daily use.

The Razr 2025 lacks the fancy leather and wood finishes of the Razr Ultra 2025 and instead features an eco leather finish made of a silicone polymer blend. The main display is a plastic OLED folding display, while Gorilla Glass Victus protects the Cover Display. The frame is made from aluminum, while the hinge is made from stainless steel.

Like its siblings, the Razr has IP48 dust and water protection, which makes it feel premium. Yes, the eco leather finish isn't as plush, but it offers the same core experience at a much more affordable price. Even if you've never held a Razr, it still wows you like its siblings, especially in this unique light green Spring Bud color.
