## With national support, China unveils breakthrough chip to power the 6G era

Imagine a world where lightning-fast, reliable wireless connectivity is available everywhere, from the most remote mountain village to the busiest city center. That vision is inching closer to reality thanks to a landmark breakthrough by Chinese scientists, who have developed a next-generation chip that could lay the groundwork for 6G communication networks

On August 27 2025, the prestigious journal Nature published a study by Professor Wang Xingjun of Peking University and Professor Wang Cheng of City University of Hong Kong. Their teams jointly announced the creation of a reconfigurable, ultra-broadband photonic-electronic chip that shatters long-standing barriers in wireless communication.

The chip enables wireless transmission speeds of 50–100 gigabits per second (Gbps) across all frequency bands. This performance surpasses today's 5G networks by two to three orders of magnitude, setting a new benchmark for the global race toward 6G.

"This reconfigurable, ultra-broadband chip offers a core solution for achieving full-spectrum wireless communication and dynamic spectrum management," Wang Xingjun said. "It marks an important milestone for hardware in the 6G era, providing both new research directions and industrial application possibilities."

The transition from 5G to 6G is not simply an incremental upgrade. Instead, it demands solutions to deep technical obstacles, especially in high-frequency

communication. Traditional frequency-multiplying techniques suffer from what experts call "noise accumulation." As frequencies rise, signal quality drops sharply, making full-spectrum 6G expansion prohibitively complex, costly, and less efficient.

At the same time, denser wireless access is expected to make the electromagnetic environment more crowded. That complexity raises major challenges for spectrum management, reliability, and stable connectivity.

The breakthrough by the Wang-Wang team tackles these barriers head-on. By equipping the chip with photonic capabilities, the researchers leveraged the vast bandwidth of light to process wireless signals without the usual frequency constraints.

The team used an advanced thin-film lithium niobate material as the platform, transforming electrical signals into optical ones for processing. On a chip about the size of a fingernail, they integrated all the critical building blocks of a wireless transceiver system, which includes baseband modulation, carrier generation, and frequency conversion. The result: nearly eight octaves of bandwidth-handling

capacity, something never achieved before at this scale.

Laboratory results confirmed that the system demonstrated wireless transmission beyond 100 Gbps, fully meeting the peak rate requirements envisioned for 6G. Crucially, the transmission quality remained consistent across all frequency bands. Unlike previous approaches, no performance decline was detected at higher frequencies.

### **Where AI meets hardware**

A growing consensus within the telecommunications industry holds that artificial intelligence (AI) will be a core component of 6G networks. But even the most sophisticated algorithms require flexible, responsive hardware to put their decisions into practice.

Here, too, the new photonic-electronic chip offers a solution. Its reconfigurable design allows internal optical pathways to be adjusted in real time. This makes it possible for the chip to respond directly to AI-driven commands.

For example, if AI detects interference in one part of the spectrum, the chip can instantly switch communication to an idle frequency band. The process is seamless, maintaining stable, high-speed, low-latency connectivity at all times.

Researchers describe this as an embodiment of the “native AI” philosophy of 6G. Intelligence is not limited to algorithms running in the cloud; it is embedded deep within the hardware itself, forming a tightly integrated system where software and hardware act in concert.

This chip is only one of several recent breakthroughs that highlight China’s accelerating role in frontier science and technology.

On March 20, 2025, Chinese researchers unveiled “North Brain No. 1,” the country’s first semi-invasive brain-computer interface (BCI). The device successfully helped a patient with amyotrophic lateral sclerosis (ALS) who had lost the ability to speak to communicate again. Clinical results showed that the system could decode individual characters with a latency of under 100 ms, placing it among the world’s leading BCI technologies.

Just a few months later, in August, Beijing hosted the World Robot Conference. Official figures released at the

event showed that China’s industrial robot sales reached 302,000 units in 2024, making it the world’s largest market for the twelfth consecutive year. Patent data revealed that China accounted for two-thirds of all global robot-related patent applications in 2024. Xu Xiaolan, president of the China Electronics Society, noted that this underscored China’s dominance in robot innovation.

Underlying these advances is strong policy support from the highest levels of government. On July 23, 2025, seven key agencies, including the Ministry of Industry and Information Technology, the National Development and Reform Commission, and the Chinese Academy of Sciences, issued a joint plan to accelerate BCI development. The roadmap sets 2027 as the target year for achieving breakthroughs in core technologies, establishing an advanced ecosystem of technologies, industries, and standards. The plan envisions BCIs being applied not only in healthcare but also in manufacturing and consumer electronics.

China’s top leadership has also placed science and technology innovation at the center of national development. At an April 30 policy meeting on the upcoming “15th Five-Year Plan” period (2026–2030), President Xi Jinping stressed the need to strengthen the national innovation system, promote basic research, and boost original innovation capabilities. He urged intensified efforts to break through in core and frontier technologies, providing a strategic blueprint for the country’s future.

Observers say these remarks reaffirm China’s determination to play a leading role in global science and technology. They also provide favorable policies that back projects, such as the photonic-electronic chip, that bridge academic research, industrial application, and strategic national priorities. The latest released guiding document is an action plan released by the State Council on August 26, which set out the overall requirements, development goals, and key directions for implementing the “AI Plus” initiative and laid out plans for “AI Plus” in science and technology, industrial development, consumption upgrading, people’s well-being, governance capacity, and global cooperation.

## The Samsung Galaxy S26 Ultra Added A New Built-in Privacy Display

### Samsung Galaxy S26 Ultra: Design

**More Rounded Corners With A Larger Camera Plateau**  
 The Samsung Galaxy S26 Ultra received a few new design features that have been seen on other Samsung products. The tech brand introduced a larger camera plateau in July 2025 with the Samsung Galaxy Z Fold 7—now, the Samsung Galaxy 26 Ultra adopts this bump. While the phone itself shaves off 0.3mm thickness, this bump makes it appear thicker than before. Despite this bump, it's still also slightly lighter; the new build shaved four grams off the weight. Rounded corners make it a little sleeker, too.

It's not particularly innovative—or at least not compared to its siblings, the Samsung Galaxy Z Fold 7 and the Samsung Galaxy Z Flip 7, both of which received major design upgrades last year—but I believe it looks lovely.

### Samsung Galaxy S26 Ultra: Display

#### Keep Your Scrolling Private

While the display doesn't change—it's still a 6.9-inch

AMOLED—what does change is the technology behind it. Now, when I'm on the subway or in a cramped plane seat and want to keep my scrolling for my eyes only, I can. Privacy Display is a customizable technology that allows me to control who sees what on my display. When enabled, angle the phone in any direction and it obscures the screen.

I found this to be one of the most useful features in any smartphone I've tested over the last year, and it's one that might be well received on every mobile device. It dims the display, but not so much so that I was bothered by it.

Samsung also created varying tiers of protection. If you want full privacy protection, plan to turn on Maximum Privacy Protection, which completely blots the display. While the regular tier reduces the display somewhat, my husband could still read what was on the screen while looking over my shoulder until I enabled the maximum protection. But if you're not worried about masking your screen from prying eyes—or prefer your display stay vivid—then I could see this feature feeling like overkill. Still, I appreciated that it's customizable. You can enable privacy protection across the entire display or limit it to specific areas like notifications or text messages. You can also enable app-by-app. You can't create different privacy profiles for when you're on the subway that differs from when you're spending time with friends, as an example.

Qualcomm chip called the Snapdragon 8 Elite Mobile for Galaxy Gen 5. I tested the phone playing mobile games like *Stardew Valley*, *Arknights: Endfield* and more. Gameplay showcased nicely on the phone: Graphics are smooth, colors are vivid, the touch display feels responsive and the vapor chamber does an excellent job of keeping the phone cool without feeling too toasty. I also benchmarked the processor and noted its high scores, which indicates that it can handle heavy processing power. I cross-tested multiple applications and noted the phone's smoothness and responsiveness, which confirmed its blazing fast speeds.

There are also new AI tools available: Now, you can make Perplexity your main AI agent. You're no longer stuck choosing between Samsung Bixby and Google Gemini. It takes a minute to locate—make sure you search for “digital assistant” in the settings search bar—and you'll need to install Perplexity to make the swap. Once you do, you can long-press the action button and ask questions via voice command or text. Fans of Perplexity will enjoy being able to use this AI without needing to unlock the phone and then scour for the app.

## Samsung Galaxy S26 Ultra: Cameras

### Better Low-Light Photos

Not much changed in the hardware from its predecessor, the Samsung Galaxy S25 Ultra, and during testing, the camera set remained one of my favorites on the market. It captures details nicely and colors look vivid. What is different: Samsung increased lens aperture sizes. That may seem like a trivial enhancement, but enlarging the aperture helps improve low-light photography. This hardware captures more details, enhances shadowing and more.

During testing, I shot multiple images of my cat in low lighting using the Samsung Galaxy S25 Ultra and the Samsung Galaxy S26 Ultra. When I reviewed images, I noted that the S26 Ultra captured much more vivid

colors—the difference feels truly drastic. Details looked sharp when blown up on a monitor; shadows look more enhanced and add more depth on the S26 Ultra than the S25 Ultra, too. Subjects also looked clear, but there's still one caveat: Your subject needs to be fairly still. Because I used my energetic cat as my test subject, I noted that images that captured his sudden movements still showed some minor blur. If you plan to snap social-worthy photographs in darker environments, this enhancement is worth the investment.

### A Smarter Way To Stabilize Footage While You Move

Another feature, called the Super Steady Horizontal Lock, is an impressive tool for content creators. When you film on your phone and rotate your phone, the image also rotates. Horizontal Lock keeps it where you lock it, so when you rotate the phone, the image remains stabilized. Tap the Super Steady button on screen and navigate to Super Steady With Horizon Lock On to enable it.

It's a useful tool for content creators, especially those who are attempting stunts—it truly keeps the video capture locked and fairly stabilized. I tried flipping the phone and rotating it multiple times. No matter how much I twisted the phone, the video remained stationary, which I found delightful. But again, if you're not planning on capturing much action footage, it might be overkill for your needs. It made it easier to capture of my cats playing.

## ➤ Forget the standard Fold: Samsung's new Galaxy TriFold Wide patent just leaked

Samsung continues to push the boundaries of mobile innovation with its latest patent for a tri-folding smartphone. This bold concept introduces a wider, tablet-like form factor with a squarer aspect ratio, potentially reshaping the balance between portability and functionality. While the patent filing does not confirm production, it provides a compelling insight into the future direction of foldable technology and Samsung's vision for the next generation of mobile devices. The video below from Greggles TV gives us more details about this new Samsung device.

The tri-fold mechanism represents a significant evolution from Samsung's current foldable devices, such as the Galaxy Z Fold series. The patent reveals several notable design features that could set this device apart:

**Wider and Lighter Design:** The proposed tri-fold design could result in a thinner and lighter device, addressing common concerns about the bulkiness of foldable smartphones. This would make it more convenient for users to carry and use on the go.

**Larger External Display:** A more functional external screen would enhance usability when the device is folded, making it practical for everyday tasks such as messaging, checking notifications, or even quick browsing without unfolding the device.

**Seamless Transition:** The design prioritizes a smooth and intuitive shift between phone and tablet modes, catering to users who value versatility and adaptability in their devices.

These innovations suggest that Samsung is not only

focused on creating a visually striking device but also on addressing practical concerns to improve the overall user experience.

## ➤ Apple Just Leaked iOS 27 Features Early: New Visual Intelligence Coming to iPhone

Apple seems to have inadvertently revealed several key features of its upcoming iOS 27 update, which is expected to be officially announced during the Worldwide Developers Conference (WWDC) in June 2026. The update is poised to focus on enhancing user convenience and efficiency, with significant advancements in visual intelligence, health integration, and AI-powered tools. These potential features provide a glimpse into how Apple continues to refine its ecosystem to better serve its users.

iOS 27 is expected to bring substantial improvements in visual intelligence, allowing your device to handle everyday tasks with greater speed and accuracy.

**Nutrition Tracking Made Easy:** The update introduces a feature that allows you to scan nutrition labels on food packaging. Your device will extract essential details, such as calorie counts, sugar levels and other nutritional information, and seamlessly integrate them into the Health app. This tool is designed to help you monitor your dietary habits with greater precision, offering a convenient way to stay on top of your nutrition goals.

**Automatic Contact Creation:** Another practical enhancement is the ability to scan phone numbers, email addresses and physical addresses from sources like business cards or flyers. Once scanned, your device will automatically create new contacts, saving you time and minimizing errors from manual entry. This feature streamlines the process of managing your connections, making it easier to stay organized.

## ➤ **Even Realities G2 Smart Glasses Built for Busy Professionals**

The Even G2 smart glasses have carved out a niche in wearable technology by prioritizing practicality and subtlety over flashy features. In a detailed review, Naseem Speech explores how these glasses integrate seamlessly into daily routines, offering features like a discreet head-up display (HUD) for real-time notifications and conversational assistance. One standout detail is the absence of outward-facing cameras, a design choice that ensures privacy and natural interactions. With a lightweight frame and a focus on delivering relevant information without distractions, the Even G2 aims to enhance productivity while respecting personal boundaries.

In this breakdown, you'll uncover how the Even G2's thoughtful design supports professionals and multitaskers alike. Learn how features like teleprompter mode and real-time language translation can streamline tasks and discover why the extended battery life, lasting up to two days on a single charge, is a fantastic option for those with demanding schedules. Whether you're navigating a busy workday or managing personal commitments, this guide will help you understand what makes the Even G2 a practical choice for discreet, everyday functionality.

The design of the Even G2 smart glasses is a testament to understated elegance. At first glance, they resemble traditional eyewear, avoiding the bulky and conspicuous hardware often associated with augmented reality (AR) devices. This minimalist approach makes them suitable for a variety of settings, from professional environments to casual outings.

The lightweight frame is carefully balanced, making sure comfort even during prolonged use. Whether you're commuting, attending meetings, or working long hours, the glasses remain unobtrusive and easy to wear. By eliminating visible cameras and other intrusive components,

the Even G2 prioritizes discretion and natural aesthetics, appealing to users who prefer technology that integrates seamlessly into their lives without drawing attention.

## ➤ **Indian Smartphone Shipments Dropped to Six-Year Low in Q1 2026 as Vivo Topped Market, Nothing Led Growth: Counterpoint**

Smartphone shipments in India declined 3 percent year-over-year (YoY) in the first quarter of this year, marking the weakest first quarter in the past six years, according to Counterpoint Research's Monthly India Smartphone Tracker report. The ongoing memory price pressures, price hikes across segments, and low consumer demand are the key reasons for the fall. Despite weak sales, Vivo led smartphone shipments in India with a 21 percent market share. Samsung came in second position, while Oppo retained third place. Nothing emerged as the fastest-growing smartphone brand with 47 percent YoY growth in Q1 2026, while Google is the fastest-growing brand in the premium segment.

Counterpoint Research's new Monthly India Smartphone Tracker report reveals that India's smartphone shipments fell 3 percent YoY in Q1 2026. It is the weakest quarter in six years in this period, and the fall is attributed to supply-side costs, price hikes by smartphone companies and low consumer demand. To counter rising component costs due to the ongoing memory price surges and currency fluctuations, around one-third of new smartphone launches were pushed into Q1.

handset, believed to be the OnePlus Nord CE 6, has been discovered on a benchmarking site. The listing not only reveals the purported handset's moniker but also sheds light on some of its key specifications. It is seen with 8GB of RAM.

A OnePlus handset bearing the model number CPH2805 has been listed on Geekbench (first spotted by tipster Abhishek Yadav). The model number is believed to corroborate the OnePlus Nord CE 6, which is rumoured to be launched soon. The purported handset is listed with an octa-core chipset with an ARMv8 architecture and a base operating frequency of 1.80GHz.

The SoC appears to comprise one core clocked at 2.71GHz, three cores clocked at 2.40GHz, and four cores operating at the base 1.80GHz frequency. Comparing the SoC's core configuration to available chipsets in the market reveals it to be the Snapdragon 7s Gen 4 chipset. It, notably, also powers handsets like the recently launched Motorola Edge 70 Fusion and the Vivo T5 Pro.

The OnePlus Nord CE 6 could be paired with approximately 7.21GB of RAM, which could then be marketed as 8GB. The handset is listed as running Android 16 and may ship with OxygenOS 16 on top. Gadgets 360 staff independently verified the listing of the purported handset on the benchmarking site.

Benchmark scores for the OnePlus handset give us an idea of what to expect in terms of performance. In the Geekbench 6.7.0 for Android AArch64 benchmarking test, it registered scores of 1,101 (single core) and 3,117 (multi core) points, respectively. For context, last year's OnePlus Nord CE 5 achieved single-core and multi-core scores of 1,317 and 3,989 points, respectively.

## **Vivo X300 FE Storage Options Leaked Alongside Live Image With Telephoto Extender Kit**

Vivo X300 FE will be launched in India soon by the smartphone maker. The upcoming handset is confirmed to arrive along with the flagship Vivo X300 Ultra. The company recently teased the launch of the two new smartphones in the country, while also revealing their design. Additionally, the tech firm also revealed that the two phones will ship with support for external telephoto extender kits that will be attached to handsets. Now, a purported image of the Vivo X300 FE with the telephoto converter attached has surfaced online. On top of this, a tipster has shared the RAM and storage variants of the soon-to-be-launched phone.

In a post on X, tipster Sanju Choudhary has claimed that the Vivo X300 FE will be sold in India in two RAM and storage configurations. While the base variant is claimed to feature 256GB of onboard storage, the top-of-the-line model is said to offer 512GB of internal storage. Additionally, both models are tipped to feature 12GB of RAM.

Moreover, the leaker claims that the 200mm 2G2 external telephoto extender will need to be purchased separately by customers. In the purported image shared of the smartphone with the telephoto lens, the case is shown to feature the Zeiss branding. The kit will reportedly be offered in at least a silver shade.

This comes shortly after the tech firm began teasing the launch of the Vivo X300 FE and Vivo X300 Ultra in India, confirming their imminent arrival in the country. Additionally, the dedicated microsites for the two phones have been made live, confirming their availability in the country via Flipkart, Amazon, and the Vivo India online store.

The Vivo X300 FE was launched in Russia on March 4 at a starting price of RUB 60,124 (roughly Rs. 71,000) for the base 12GB + 256GB configuration. Meanwhile, the higher-end option, offering 12GB of RAM and 512GB of storage, arrived at RUB 64,405 (roughly Rs. 76,000). The smartphone is powered by an octa core Snapdragon 8 Gen 5 chipset from Qualcomm, paired with a 6,500mAh battery. It supports a 6.31-inch LTPO AMOLED display, delivering up to 120Hz of refresh rate.
