WITH TOP RATING

Huawei unveils AI-native framework and new generation solutions to enable all intelligence

The communications industry is entering a new phase of transformation, as operators move beyond basic automation towards building intelligent networks. Rising network complexity, surging data traffic and the rapid adoption of Artificial Intelligence (AI) across enterprises and consumer use cases are exposing the limitations of traditional operations models, which remain largely reactive and fragmented.

At the recently concluded MWC Barcelona 2026, Huawei outlined its vision for this shift, unveiling what it describes as the industry's first AI-native framework for intelligent operations, alongside a new suite of solutions designed to accelerate the transition. The announcement is in line with a broader industry trend, where telecom operators are increasingly looking to leverage AI across the entire network lifecycle, from Operations and Maintenance (O&M) to customer engagement and monetisation.

According to Capgemini, telcos have, on average, achieved a 20% improvement in operational efficiency and 18% reduction in operational expense through autonomous networks over a period of two years. While telcos are increasingly using AI to automate networks, the rise of AI-powered tools and applications is placing new demands on network performance and reliability.

President of Huawei's Global Technical Service, Bruce Xun, announced the launch of three solutions, Agentic BSS, SmartCare Intelligence and AUTINOps,

which he believes will "ensure a seamless evolution while establishing new paradigms, creating new value, and achieving a massive leap in intelligence." He was speaking in a session on Agentic Services and Software Enable All Intelligence.

These solutions are based on an AI-native framework, which is "designed to accelerate the transition of AI innovations into real production, creating tangible new value," said Xun.

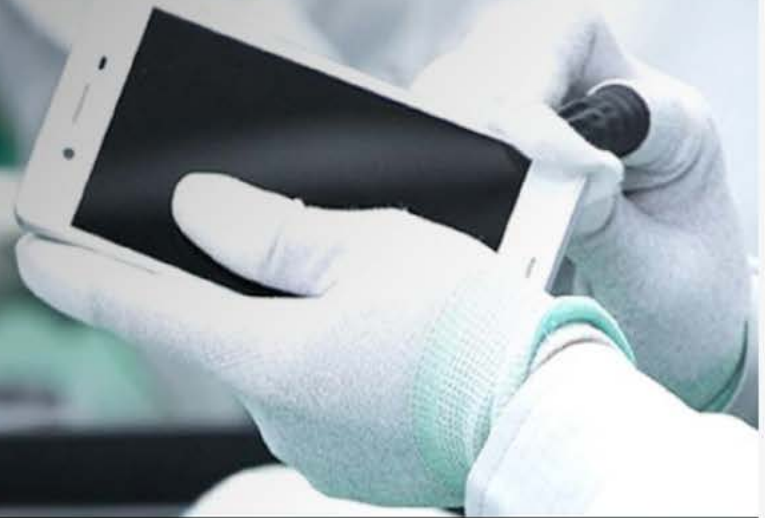

This framework is built on three core pillars. To begin with, it targets operational and business challenges that legacy solutions have failed to resolve. Secondly, it leverages digital twins and telecom-domain models to enable optimal solutions. Thirdly, the framework reinvents workflows and talent development to ensure a seamless collaboration between human experts and digital employees.

A key challenge for service providers today is that traditional operations models remain largely reactive. The tariff design and launch process is slow, and may not meet customer needs or effectively

recommend the right products at the right time.

In this context, Agentic BSS focuses on transforming business operations by introducing AI agents that can interpret customer intent, design new offerings and optimise customer engagement. By enabling collaboration between multiple agents, service providers can significantly reduce time-to-market and deliver more personalised services.

“The key to intelligent operations lies in our ability to anticipate customer intent and identify unmet needs,” said Xun. This shift towards intent-driven operations is particularly relevant as operators expand into enterprise services and digital ecosystems, where responsiveness and customisation are critical.

Huawei received a Silver award in the Total Experience category for its collaboration with a Chinese operator, where AI-driven account management agents were introduced. These digital assistants improved response times, reduced business processing time by 30%, and enhanced enterprise customer engagement.

Reimagining network optimization

While business transformation is one aspect, network operations remain central to the AI-native vision. SmartCare Intelligence, another solution introduced by Huawei, is designed to move network optimisation from a reactive to a predictive model. By leveraging large AI models, including User Experience Large Model (UELML) and Beam Space Large Model (BSLM), the system can analyse network data in real time, simulate potential scenarios and generate optimal adjustments. This approach ensures that the networks are always tuned to deliver optimal performance. This is significant because service providers are struggling with growing network complexity. AI-driven systems can help them provide consistent service quality.

Towards predictive and preventive operations

The third pillar of Huawei’s portfolio, AUTINOps, focuses on Operations and Maintenance (O&M), introducing a predictive approach to network reliability.

Traditional O&M models often respond to faults after they occur, leading to service disruptions and longer recovery times. AUTINOps addresses this by identifying potential risks in advance and taking preventive action. It uses a cross-domain digital twin network and EDNS 2.0 model to monitor networks in real time, detect risks and trigger recovery actions. It combines proactive risk mitigation (T-1) with quick fault recovery (T0) to ensure “dual protection,” leading to high uptime and network reliability.

Huawei’s approach is beginning to see validation in real-world deployments. At the World Communication Awards (WCA), the company received a Silver award for Best Digital Transformation Programme for its work with a Middle Eastern operator, where it implemented an AI-driven O&M system focusing on fault management and resource topology optimization. Based on the AUTIN platform, the solution enabled over 95% topology visibility across VoWiFi access points, LTE anchor points and IMS core network elements. It delivered measurable improvements, including service availability exceeding 99.5%, a 40% reduction in call drop rates, and significant gains in fault detection and repair times.

Xun emphasized the importance of robust connectivity, without which AI remains an information silo. He urged the industry leaders to standardize definitions and specifications of AI native elements, jointly design new business and transaction models and to share best practices to simplify network operations while ensuring improved performance.

HONOR Launches the HONOR 600 Series Setting New Standards for the Accessible Flagship Category

Global AI device ecosystem company HONOR unveiled the all-new HONOR 600 Series. Designed for a new generation of creators who don't just want to capture moments but creatively reinterpret them and share them with the world, the HONOR 600 Series combines industry-exclusive AI Image to Video 2.0, a flagship-level 200MP Ultra-Clear Night Camera, segment-leading 7,000mAh Long-life battery, Snapdragon flagship-class processors, and an ultra-bright 6.57-inch 8,000nits display, all housed within the most refined design in Number Series history. The result is a device that pushes beyond the boundaries of its category — not just in specifications, but in the experience it enables.

Redefining Mobile Creativity with Industry-Exclusive AI Image to Video 2.0

At the heart of the HONOR 600 Series' creative capability is AI Image to Video 2.0, powered by the industry's first unified multi-modal video generation model — a system that integrates video generation, editing, and comprehension into one seamless workflow. Users can combine up to three images with natural language prompts to produce stunning 3–8 second video sequences, define both opening and ending frames for full narrative control, and access the industry's most extensive library of cinematic templates

for stylized film-quality results in a single tap.

Offering endless creative possibilities, a dedicated AI Button provides instant access to video generation from the Gallery, while the AI Photos Agent enables natural language-driven editing — simply describes the change, and it happens. Ultra Versatile Moving Photo Editing, including Moving Photo Eraser and Moving Photo Breakout Collage, rounds out the creative toolkit with dynamic 3D compositions. The momentum has already proven that previous models in the series have generated over 13.4 million seconds of AI — created video content, underscoring the demand for expressive, dynamic storytelling on mobile.

The Segment's Most Powerful Night Camera System

Building on the 200MP ultra-clear imaging legacy of the HONOR 400 Series, the HONOR 600 Series takes on mobile photography's toughest challenge — night imaging. Powered by HONOR's next-generation AiMAGE intelligent imaging architecture, the series features a 200MP Ultra-clear Night Camera on a 1/1.4-inch sensor — the largest in its class — delivering 16-in-1 with equivalent 2.24µm super pixel size and 24% greater light sensitivity through E2E AI Remosaic technology. A 12MP ultra-wide camera, a dedicated color temperature sensor, and a 50MP front camera complete the hardware foundation. On the Pro version, a 50MP 3.5X Periscope Telephoto Camera pushes reach to 120x zoom.

Stability comes from HONOR's proprietary SOIS system, achieving CIPA 6.0 (main camera) and CIPA 6.5 (telephoto lens on Pro) stabilization — the segment's strongest, rivalling entry-level mirrorless performance. Color fidelity is ensured by the exclusive AI Color Engine, a multi-camera collaborative solution debuting in the Accessible Flagship, which intelligently corrects white balance under mixed lighting for true-to-life tones straight from the shutter.

A comprehensive suite of AI night algorithms enhanced by AI Cloud Enhancement ties the system together: AI Enhanced Night Photography across 0.6–10x zoom, AI Enhanced Night Portrait with

multi-form bokeh effects (Pro), AI Super Zoom 2.0 with expanded activation range, and SuperMoon 2.0 on the Pro model for dramatic lunar compositions with foreground clarity.

Premium Design Meets Exceptional Battery Life

A larger battery typically means a thicker device. The HONOR 600 Series rejects that trade-off. Through flagship-grade integrated cold-carving craftsmanship, the device is sculpted into a seamless unibody — the most refined form in Number Series history. A satin-finish matte metal frame, Android's largest symmetrical R-corner, and the industry's narrowest 0.98mm black bezel complete a design that is unmistakably premium. Available in three striking colors: Orange, Golden White, and Black, there is a hue to suit every style. Within this slim profile, a 7,000mAh battery — the largest battery in Number Series history — is achieved without adding thickness or weight over the previous generation. An AI Battery Scheduling Engine dynamically optimizes power distribution across communication, processing, and touch response, enabling genuine two-day endurance under demanding use. Even at -20°C with only 20% charge, core functions including calls, video, and photography remain fully operational.

Charging adapts to every scenario: 80W Wired HONOR SuperCharge across the series, 50W Wireless HONOR SuperCharge on the Pro, and 27W Wired Reverse Charging on both models — including for iPhone. A five-year durability design with up to 1,600 charge cycles guarantees long-term battery health throughout the product lifecycle.

8,000nits Ultra-Bright Display and Built-In Resilience

The HONOR 600 Series raises the visual bar with a 6.57-inch display reaching 8,000nits peak brightness, 458ppi, 120Hz Free Refresh Rate, 3,840Hz Risk-Free Dimming, and 1.07 billion colors. Sunlight Mode sustains outdoor clarity through an enhanced brightness curve, optimized thermal management, and dynamic APL-based brightness adjustment — delivering up to 4,000nits at 20% APL. HONOR Eye Comfort Display balances this brilliance with long-term viewing comfort through intelligent brightness and color optimization.

A display of these capable demands equally robust protection. IP68, IP69, and IP69K water and dust resistance, together with SGS 5-star Premium Performance Certification of Drop & Crush,

ensure the device holds up against splashes, dust, drops, and the unpredictability of everyday life.

Flagship Performance and Seamless Apple Ecosystem Integration

Underpinning the entire experience, the HONOR 600 runs on the Snapdragon 7 Gen 4 with 27% CPU and 30% GPU gains for powerful gaming and fluid daily performance. The HONOR 600 Pro steps up to the Snapdragon 8 Elite on 3nm process technology, achieving 45% CPU and 44% GPU improvements — true flagship-level responsiveness across demanding applications and multitasking.

The HONOR 600 Series also extends beyond itself as a perfect companion to the Apple ecosystem. Upgraded OneHop enables HONOR-iPhone notification sync, one-tap file sharing with iPhone and Mac, hotspot sharing, and Apple Watch message display. HONOR notes and phone files are accessible on Mac as local files — bridging Android and Apple for seamless cross-platform productivity.

HONOR 600 series with Google Gemini

The HONOR 600 series with Google Gemini, empowers users to interact seamlessly via text, voice, or image for comprehensive assistance on the go. This marks a significant step towards building a truly intelligent AI assistant — one that is conversational, intuitive, and genuinely helpful. It also offers a three-month trial of Google AI Pro at no cost, providing higher access to the best of Gemini, including new and powerful features in the Gemini app like video generation powered by Veo 3.1, Nano Banana Pro image generation, the AI filmmaking tool Flow, the AI research assistant NotebookLM, plus 5TB of cloud storage.

➤ **Nvidia bets on AI-native 5G, 6G with \$1bn stake in Nokia**

The partnership 'marks the beginning of the AI-native wireless era', the companies said.

Nvidia is investing \$1bn into Nokia to advance AI in telecommunications technology, the companies announced yesterday (28 October). Nokia shares jumped more than 21pc after the announcement.

Alongside the investment, the two companies have struck a strategic partnership to power 5G and 6G networks with AI by adding Nvidia's AI-RAN (Radio Access Network) products to Nokia's RAN portfolio.

RAN is a major component of wireless telecommunications tech which connects devices to a network through radio links.

The partnership "marks the beginning of the AI-native wireless era", the announcement read. T-Mobile US is set to collaborate with the two companies to drive and test the AI-RAN tech. Trials are expected to begin next year.

"The next leap in telecom isn't just from 5G to 6G – it's a fundamental redesign of the network to deliver AI-powered connectivity, capable of processing intelligence from the data centre all the way to the edge," said Justin Hotard, the president and CEO of Nokia.

"Our partnership with Nvidia, and their investment in Nokia, will accelerate AI-RAN innovation to put an AI data centre into everyone's pocket."

The motivation behind the partnership seems to be a significant growth in mobile-based AI traffic. According to data provided by the companies, 50pc of ChatGPT's 800m weekly active users access the site through their phones.

AI-powered mobile networks would mean improved performance, efficiency and enhanced network experiences for future generative AI and agentic AI applications, the companies said.

"Telecommunications is a critical national infrastructure – the digital nervous system of our economy and security,"

said Jensen Huang, Nvidia's CEO and founder. AI-RAN will "revolutionise telecommunications" and allow the US to "re-gain global leadership" in the infrastructure, he added.

This is the latest multibillion-dollar investment for the AI chip leader, which has, in recent months, poured \$5bn into rival chipmaker Intel, promised \$100bn to OpenAI and pledged to invest £2bn to develop the UK's AI infrastructure. The company also announced a number of partnerships including with tech giants such as Uber, Amazon and Microsoft.

➤ **Tim Cook passes Apple leadership to hardware head John Ternus**

Tim Cook is stepping down as Apple's CEO after 15 years in the role. The company has announced John Ternus, senior vice president of hardware engineering, as his successor. Company shares went up marginally following the announcement.

Starting 1 September, Cook will assume the role of chairperson of Apple's board. Ternus will be joining the board.

The new CEO's position will be taken over by Johny Srouji, whose current role as the senior vice president of hardware technologies will expand to absorb the Ternus's responsibilities.

"Cook's legacy will be defined by steady [and] disciplined operational stewardship ... [yet] he has not overseen a step-change innovation that would reset Apple's competitive position for the next two decades," commented Forrester VP principal analyst Dipanjan Chatterjee.

"That's where John Ternus comes in. Ternus is a hardware engineer, which signals that Apple will seek differentiation in its physical products even as it looks to reframe the device as a substrate for intelligent experiences."

Chatterjee added: "But he must resist the temptation of incrementalism that has plagued Apple of late and escape the iPhone's gravitational pull in his quest for the next disruptive form factor."

The company is still reliant on the iPhone as it seeks its next growth engine.

Cook joined Apple in 1998 and became CEO in 2011. Under his leadership, Apple grew from a market value of around \$350bn to more than \$4trn. His tenure as CEO saw the introduction of the Apple Watch, AirPods, iCloud, Apple Pay and more.

Ternus, who joined Apple's product design team in 2001, became vice president of hardware engineering in 2013. He joined the executive team in 2021, and had been widely viewed as next in line to succeed Cook.

The outgoing CEO is stepping down at a time when Apple, and many alike, face increasing supply chain issues, memory crunch, geopolitical tensions, AI adoption woes and regulatory pressure. But despite these factors, the company posted "record" earnings in the quarter past.

"John Ternus has the mind of an engineer [and] the soul of an innovator", said Cook. "He is a visionary whose contributions to Apple over 25 years are already too numerous to count and he is without question the right person to lead Apple into the future."

Ternus added: "Having spent almost my entire career at Apple, I have been lucky to have worked under Steve Jobs and to have had Tim Cook as my mentor.

"It has been a privilege to help shape the products and experiences that have changed so much of how we interact with the world and with one another."

China blocks Meta's \$2bn Manus acquisition

China has blocked Meta's \$2bn acquisition of AI start-up Manus. In a brief statement, the country's National Development and Reform Commission (NDRC) said that the decision to prohibit foreign investment in Manus was made in accordance with Chinese laws. It has asked the parties to withdraw from the acquisition.

In a statement to SiliconRepublic.com, a spokesperson for Meta said: "The transaction complied fully with appli-

cable law. We anticipate an appropriate resolution to the inquiry." Meta did not confirm whether it would push back against the decision.

China's decision hinders Meta's massive AI plans to play catch-up with its Big Tech competitors. The company has spent billions to acquire businesses, hire expensive executives and realign its priorities around AI. Last week, the Facebook owner decided to cut 8,000 jobs in a bid to run "more efficiently" and "offset the other investments" it's making.

The company, which has budgeted \$135bn in spending this year, committed to purchasing Manus late last year, followed by the viral Moltbook platform in March for an undisclosed amount.

Manus employees and executives have joined Meta, while investors including Tencent Holdings, ZhenFund and Hongshan have already received their proceeds from the acquisition, sources have told Bloomberg.

A person familiar with the matter told the Financial Times that the NDRC's decision was "harsh", and that it carries a "strong intention to stop follow-on deals" similar to Manus.

"In reality, it's hard to unwind a done deal, so it is more about verbal warnings on similar deals and the leveraging building before the Xi-Trump summit," the source added. FT has since removed the latter half of this quote. US president Donald Trump is set to meet with his Chinese counterpart Xi Jinping next month.

Manus is headquartered in Singapore, but has a Chinese parent company called Butterfly Effect Technology. Meta acquired the company after a \$75m funding round last April that valued it at \$500m.

As per the now contested acquisition deal, Meta would operate and sell the Manus service, as well as integrate it into its own products. However, Manus would still be able to sell its subscriptions through its own app and website.

In February, the start-up launched 'Manus Agents', personal AI agents that perform similarly to the Austrian-made open source OpenClaw. The agents, which debuted on Telegram that month, had been expanded to WhatsApp shortly after. Meta did not confirm if China's decision would

affect Manus Agents on WhatsApp.

The Chinese Ministry of Commerce launched an investigation shortly following the Meta acquisition to determine whether it violated the country's laws on technology exports and outbound investment. According to the rules, the Chinese government needs to approve the export of certain technologies, including AI.

Bloomberg recently reported that Chinese agencies told the country's key AI firms that they should reject capital with US origins unless explicitly approved.

➤ **Android 17 Beta Code Points to Rear Lights on the Next Pixel**

Based on new findings in Android 17 beta code and Pixel system apps, a lights-driven "Pixel Glow" system will appear on a future iteration of the Pixel. Code spotted in Android 17 indicates that the future Pixel will use "subtle light and color" on the back of the phone to convey signals to users when the device lies face-down.

One of these signals could indicate that someone on the user's "favorites" list is calling. Other bits of code suggest "hands-free interactions using visual feedback," specifically as it relates to "speaking with Gemini." Reports also mention related internal names like "PixelLights," "Gemini Glow," and "Aurora" tied to the same code paths, Android Authority reports.

Android 17 beta strings mention a dedicated settings page for the Pixel Glow, where users can turn the lights on or off and toggle specific behaviors.

For now, it looks like Pixel Glow will probably debut with the Pixel 11 series and could also appear on a future Pixel laptop. Pixel 11 could also come with a Face ID-level security system called Project Toscana, but without a Dynamic Island-style notch.

➤ **Four Out of 10 Best-Selling Phones Globally in Q1 2026 Were iPhone Models**

According to the latest Global Handset Model Sales Tracker report by Counterpoint Research, the newly launched iPhone 17 was the best-selling smartphone in Q1 2026, commanding a 6 percent market share globally. The standard model was followed by the other two models in the lineup, the iPhone 17 Pro Max and iPhone 17 Pro, with the two occupying the second and third positions, respectively.

The report also suggests that four out of the top 10 best-selling models globally were from the Cupertino-based tech giant, as the standard iPhone 16 took the sixth spot on Counterpoint Research's Global Handset Model Sales Tracker in Q1 2026. Apart from Apple, two more smartphone makers featured on the list of the top 10 best-selling handsets.

While Apple took the top three spots, Samsung dominated the list with five of the top 10 selling phones belonging to the South Korea-based tech conglomerate. However, only the budget and mid-range models from the tech giant appeared on the list. The Samsung Galaxy A07 4G took the third spot, followed by the Galaxy A17 5G.

Last year's Galaxy A56, Galaxy A36, and the Galaxy A17 4G occupied the seventh, eighth, and ninth positions on the tracker, respectively.

Launched in February this year, the flagship Samsung Galaxy S26 Ultra "narrowly missed" a spot in the top 10 list of best-selling smartphones, according to the Counterpoint Research report. The smartphone reportedly registered stronger initial sales compared to its predecessor.

The only other brand to appear on the list was the Xiaomi sub-brand's Redmi A5, taking the 10th position in Q1 globally. The Redmi handset was also the most affordable one on the list, which reportedly saw a "sustained demand" since its launch in different emerging markets.

- ◆ Movie Clips: 4K 30fps
- ◆ LCD: 3.0" 1,040,000 dots
- ◆ Battery: Lithium-Ion LP-E17
- ◆ Storage: SD/SDHC/SDXC (UHS-II) Card
- ◆ Size: 118 x 68 x 53 mm 426g

Panasonic Lumix DC-LX100 II

- ◆ Effective pixels: 17.0 Million 4/3" CMOS
- ◆ Built-in Wi-Fi and Bluetooth
- ◆ Zoom range: 24-75 mm eqv
- ◆ Shutter range: 60-1/4000 sec
- ◆ Aperture range: F1.7-F2.8
- ◆ LCD: 3.0" 1,240,000 dots
- ◆ Battery: Lithium-Ion DMW-BLE9
- ◆ Storage: SD/SDHC/SDXC (UHS-I) Card
- ◆ Size: 115 x 66 x 64 mm 392g

DJI Osmo Action 6

- ◆ Effective pixels: 1/1.1" 38.0 Million CMOS
- ◆ Waterproof down to 20M without case
- ◆ Variable Aperture F2.0-F4.0
- ◆ Built-in Wi-Fi and Bluetooth
- ◆ Movie Clips: 8K 30fps
- ◆ LCD: 2.5" 285,000 dots
- ◆ Battery: Lithium-Ion Rechargeable
- ◆ Storage: micro SD/SDHC/SDXC Card
- ◆ Size: 72.8 x 47.2 x 33.1 mm 195g

Ricoh GR IV HDF

- ◆ Effective pixels: 26.0 Million CMOS
- ◆ Integrated Highlight Diffusion Filter
- ◆ Zoom range: 28 mm eqv
- ◆ Shutter range: 30-1/4000 sec
- ◆ Movie Clips: 1920 x 1080 60fps
- ◆ LCD: 3.0" 1,036,000 dots
- ◆ Battery: Lithium-Ion DB-120
- ◆ Storage: microSD (UHS-I) Card
- ◆ Size: 109 x 61 x 33 mm 262g

GoPro MAX 2

- ◆ Effective pixels: 1/2.3" sensor x 2
- ◆ Waterproof down to 5M
- ◆ MAX HyperSmooth with 360° Horizon Lock
- ◆ Built-in Wi-Fi and Bluetooth
- ◆ Movie Clips: 8K 30fps 360 degree
- ◆ LCD: 1.8" Touchscreen
- ◆ Battery: Lithium-Ion Rechargeable
- ◆ Storage: micro SD/SDHC/SDXC Card
- ◆ Size: 64.0 x 69.7 x 48.7 mm 195g

Fujifilm X100 VI

- ◆ Effective pixels: 40.0 Million BSI-CMOS
- ◆ Built-in Wi-Fi and Bluetooth
- ◆ Zoom range: 35 mm eqv
- ◆ Shutter range: 15-1/4000 sec
- ◆ Movie Clips: 6.2K 30fps
- ◆ LCD: 3.0" 1,620,000 dots
- ◆ Battery: Lithium-Ion NP-W126S
- ◆ Storage: SD (UHS-I) Card
- ◆ Size: 128 x 75 x 55 mm 521g

Fujifilm X half

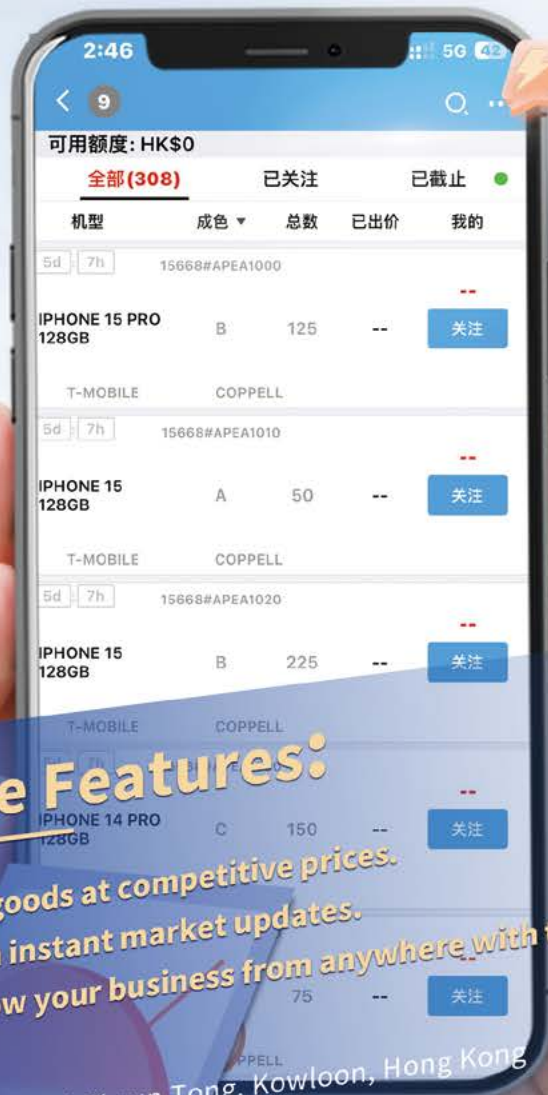

- ◆ Effective pixels: 18.0 Million BSI-CMOS
- ◆ Built-in 13 film simulation modes
- ◆ Zoom range: 32 mm eqv
- ◆ Shutter range: 900-1/2000 sec
- ◆ Movie Clips: 1080 24fps
- ◆ LCD: 2.4" 920,000 dots
- ◆ Battery: Lithium-Ion NP-W126S
- ◆ Storage: SD/SDHC/SDXC (UHS-I) Card
- ◆ Size: 106 x 64 x 30 mm 240g

Dr FONES AI

Dr Fones Ltd is a global leader in mobile device certification and diagnostics. We specialize in delivering innovative, reliable, and efficient solutions for the mobile device industry

We Diagnose iMac, Mac Book, iPhones & Android, Airpods, Apple Watches

Complete Online Checks: MDM, Carrier Lock, Blacklist, iCloud/FRP, Finance check, Warranty & Full Device Report

CONNECT 20+ DEVICES SIMULTANEOUSLY

AUTOMATED 90+ POINT INSPECTION

LOCKS, FINANCIAL ELIGIBILITY & DIAGNOSTICS

PRINT LABELS AND SECURELY ERASE

Diagnostics

Comprehensive diagnostic services to assess the full functionality of devices.

IMEI Checks

Verification of IMEI numbers to ensure the authenticity and status of devices.

Custom Labels

Create customized labels for devices, ensuring easy identification and tracking.

Cloud-Based Inventory

Manage your inventory through a secure cloud platform for easy access and tracking.

OEM Verification

Verification of original equipment manufacturer (OEM) status for all devices.

ADISA Certified Data Wipe

Certified data wiping to ensure complete and secure data removal (ADISA certification).

24/7 Support

Round-the-clock customer support to assist with all your device testing and management needs.

GLOBAL PRESENCE

OUR BRANCHES IN:

DRFONES LTD - UK

DRFONES LLC - USA

DRFONES FZCO - UAE

DRFONES LTD - IRELAND

Why Choose Dr Fones?

✓ Dr FONES AI Automation

Speed, Precision & Efficiency in Mobile Diagnostics. Test up to 1000+ devices daily with our advanced AI automation, reducing costs and boosting profits.

✓ Top-quality repairs

We guarantee top-quality repairs through thorough testing and certification, ensuring devices are restored to optimal functionality.

✓ Advanced technology

Leverage cutting-edge technology for rapid, precise diagnostics services that ensure accuracy and reliability.

✓ Boost Efficiency

Our swift and reliable solutions enhance business operations, allowing you to process devices quickly and efficiently.
