# U6GHz: Powering AI-Native 5G-Advanced Towards the 6G Era

The upper 6 GHz (U6GHz) band, defined as 6425–7125 MHz, is becoming a key spectrum layer for the evolution of 5G-Advanced (5G-A) and early 6G network design. Located between traditional mid-band and millimeter-wave frequencies, it combines wide-channel bandwidth with favorable propagation, making it well-suited for expanding capacity in dense urban areas.

As global traffic shifts to AI-driven applications, immersive services, and uplink-intensive workloads, demand for additional mid-band spectrum is increasing.

"The U6GHz band is widely recognized as a key frontier for scalable mobile broadband, driven by the rapid growth of the global AI economy rather than individual device metrics."

The IDC predicts that the global artificial intelligence (AI) market will exceed USD 631 billion by 2028, representing a 27% CAGR. Software and information services, banking, and retail are leading this growth, and are expected to rise to nearly USD 222 billion by 2028.

AI adoption across software platforms, financial services, and retail is transforming data generation and processing in networks. AI systems are now embedded in applications such as intelligent assistants, automated decision engines, and generative content platforms, all of which rely on cloud-based inference and feedback. This shift is creating a more data-intensive communication model, with network demand increasingly driven by both human and machine-to-cloud or AI-to-AI interactions.

## The UAE's U6GHz Commercial PoC

In 2026, the United Arab Emirates became the first country to commercially launch a U6GHz network, transitioning from trials to large-scale deployment. Led by the Telecommunications

and Digital Government Regulatory Authority (TDRA), with active participation from ecosystem partners including Huawei, du, e&, GSMA, Nokia, HONOR, Tozed, and the SAMENA Telecommunications Council, this initiative advances mobile infrastructure to address increased data intensity and AI-driven traffic. The deployment positions the UAE as a global leader in spectrum use and supports its goal of becoming a "10-gigabit intelligent nation" through early adoption of 5G-Advanced and future 6G technologies.

Known as the "golden spectrum," the U6GHz band (6425–7125 MHz), defined in 3GPP as Band n104, offers a continuous 700 MHz bandwidth that balances wide-area coverage and high capacity.

"Industry estimates indicate that U6GHz networks can achieve peak downlink speeds of up to 10 Gbps and uplink speeds of around 1 Gbps under 5G-Advanced, bridging current 5G and future 6G needs."

## Why Upper 6 GHz Matters for 5G-Advanced

U6GHz is especially important for 5G-Advanced development. Unlike early 5G, which focused on downlink-heavy consumer traffic, 5G-A emphasizes balanced bidirectional performance. This shift is driven by 3GPP Release 18, which standardizes AI-native capabilities and integrates AI/ML across the core network, RAN, and air interface, including model transfer, distributed inference, and federated learning across multiple working groups (SA1–SA5 and RAN1–RAN4).

This reflects the rapid growth of AI-driven traffic. According to 3GPP, earlier projects involving AI and machine learning mainly concentrated on automating networks and collecting data for different network functions, with no specific mention of uplink rate or latency requirements for AI/ML split

inference or edge intelligence.

“Rather than replacing existing infrastructure, U6GHz complements established mid-band 5G deployments, particularly the widely used 3.5 GHz band (3.3–4.2 GHz), which over 60 countries have assigned for 5G, and which remains the main driver of mid-band capacity and economic value.”

However, as demand grows, relying solely on current mid-band allocations such as 3.5 GHz may limit future capacity expansion. Additional spectrum layers, such as U6GHz, are important for supporting sustained growth in 5G-Advanced performance and scalability.

### **Why U6GHz Is Strategically Aligned**

China’s 5G-Advanced roadmap emphasizes the development of technologies that will significantly improve uplink throughput and reliability utilizing carrier aggregation, dynamic spectrum sharing, and supplementary uplink configurations.

In line with this, according to Huawei, the comprehensive U6GHz portfolio is designed to maximize the advantages of ultra-large bandwidth by covering a full range of network sites and equipment, supporting high-capacity applications and meeting growing demands in advanced AI and industrial networks. Huawei’s U6GHz solution suite demonstrated this through deployments combining up to 400 MHz of bandwidth, advanced ELAA-based AAU architectures, and coordination across macro, micro, and indoor small-cell systems.

With AI applications driving 3–5× higher uplink demand through multimodal interactions, real-time decision-making, and cloud-based inference, the ecosystem is being designed to meet large-capacity, low-latency, and deterministic performance requirements.

U6GHz will complement the broader multi-band 5G-Advanced architecture and is now commercially available. CPEs and smartphones are expected through 2026, enabling scalable deployment across indoor, outdoor, and transport layers as part of the evolving AI-native mobile ecosystem.

### **A Future Where U6GHz Is the Bridge Between 5G-A and 6G**

U6GHz is strategically important for several reasons. First, it accelerates 5G-Advanced commercialization by providing additional spectrum for high-capacity services as AI-native applications reshape traffic patterns. Industry analysis shows uplink demand is entering a high-growth phase, driven by cloud-based AI processing. Emerging applications such as AI glasses and always-on intelligent agents generate uplink streams of about 1.4 Mbps per active session, with always-on configurations sustaining approximately 0.14 Mbps during extended daily use.

Second, U6GHz strengthens Super Uplink architectures, especially in urban areas where uplink traffic is growing faster than downlink due to AI assistants, cloud computing, and industrial automation. This marks a shift in mobile networks, with uplink becoming the “new currency” of connectivity as devices generate continuous data.

Third, U6GHz serves as a transitional step toward 6G spectrum planning, aligning with global discussions on extended mid-band and FR3 frequencies to support real-time cloud intelligence and efficient on-device processing.

As AI cloud computing, and mobile technologies converge, networks are shifting to a dynamic uplink–downlink balance, with data continuously generated, processed, and refined in real time. Autonomous vehicles, AI-enabled IoT devices, and immersive XR platforms will drive uplink demand, while cloud-based AI models process large datasets and return optimized intelligence to edge devices, creating a continuous feedback loop.

“This evolution demonstrates that future network design must prioritize adaptive intelligence across the RAN and cloud layers, rather than static capacity provisioning.”

Ultimately, U6GHz serves not only as a capacity expansion layer but also as a foundational enabler of converged architecture. It supports scalable uplink-intensive services today and prepares the ecosystem for the next wave of autonomous, AI-native connectivity.

## Apple debuts iPhone 18 Pro and iPhone 18 Pro Max

The new Pro lineup introduces variable aperture with the most advanced camera in an iPhone, incredible battery life, and next-level performance, all powered by A20 Pro

Apple announced the iPhone 18 Pro and iPhone 18 Pro Max at its event on September 9. The 18 Pro and Pro Max come in deep black, silver, “glacier,” and burgundy, with color-matched back glass. They also have a new A20 Pro chip and purportedly the longest battery in an iPhone. The iPhone 18 Pro starts at \$1,199 for 256GB, a \$100 increase over the iPhone 17 Pro, while the 18 Pro Max starts at \$1,299, also for 256GB. Both models will be offered in 256GB, 512GB, 1TB, and 2TB configurations. Preorders begin on September 12 ahead of availability on September 18.

During the presentation, Apple highlighted how the new phones are well-equipped to work with Apple Intelligence and Siri AI, including Siri AI’s more

expressive voices.

The A20 Pro has a “brand new architecture” built on 2nm technology, like Apple’s M6 chip. It has a 6-core CPU with two “desktop-class” super cores and four efficiency cores. It also has a “significantly advanced” GPU with a 7-core design that enables a “40 percent” increase in performance, according to Sribalan Santhanam, VP of Apple’s silicon engineering group. Apple has also added a second neural engine for a total of 32 NPU cores.

In addition, the iPhone 18 Pro has a “next-generation vapor chamber” with three times the surface area as the one in the 17 Pro to help cool the phone. The iPhone 18 Pro has all-day battery life comparable to the iPhone 17 Pro Max, according to Rich Dinh, VP of hardware engineering. Video playback is 36 hours for the iPhone 18 Pro, and the 18 Pro Max gets 45 hours. Apple says just 15 minutes of wired charging provides 50 percent charge for the iPhone 18 Pro, and for the 18 Pro Max, five minutes of wired charging gets you seven hours of video playback.

The iPhone 18 Pro also offers the “biggest camera improvement in years,” including a 48 megapixel variable-aperture main camera with six blades “thinner than a human hair” and a new sensor. In darker environments, the aperture opens up to let in more light, which means that night mode captures will be

faster with better quality, Apple says. As for video, you can now take 4K resolution time-lapse videos in Dolby Vision HDR.

Apple is also offering “Pro controls” to give you more manual control over your camera, like changing shutter speed to tweak motion blur. Pro controls are available for both photos and videos. There are improvements to photographic styles, offering texture and grain control. And Apple will support Google’s SynthID content authenticity protocol, as well as a new “Apple Reference Image” standard that cryptographically signs images at capture, creating an unalterable “digital negative.”

A smaller Dynamic Island on the iPhone 18 Pro line can now show three Live Activities. There are updated accessories as well, including a revised clear case. The iPhone 18 Pro line is also Apple’s first set of phones with a new C2 cellular modem, which supports mmWave 5G and “delivers meaningfully faster uploads when compared to C1X while consuming 15 percent less energy,” Apple says.

The new phones follow a major redesign introduced with the iPhone 17 Pro and Pro Max in 2025. That

redesign dropped titanium in favor of an aluminum body, introduced a vapor chamber to help keep the phone cool, and added a camera bar (which Apple calls the “plateau”) that stretches across the back. The 17 Pro line also launched in a bold orange color that was good and well-timed, a nice silver, and a great deep blue. And last fall’s iPhone refresh brought the 18-megapixel Center Stage front camera that lets you take wide selfies even when you’re holding the phone in portrait mode.

iPhone 18 Pro and iPhone 18 Pro Max were built with the environment in mind, and drive progress toward Apple’s ambitious plan to be carbon neutral across its entire footprint by 2030. Both models are made with 40 percent recycled content overall, including 100 percent recycled cobalt in the battery and 85 percent recycled aluminum in the enclosure. They are manufactured with 50 percent renewable energy, like wind and solar, across the supply chain, and meet Apple’s high standards for energy efficiency and safe chemistry. Like all Apple products, their paper packaging is 100 percent fiber-based<sup>9</sup> and can be easily recycled at home.

# 翻新及二手手機市場概況

Refurbished and Used Mobile Phones Market Overview

The global refurbished and used mobile phones market size reached USD 34804.28 million in 2026. Looking forward, the market to reach USD 66026.55 million by 2035, exhibiting a growth rate (CAGR) of 7.3% during 2026-2035.

The refurbished and used mobile phones market has expanded rapidly, driven by a combination of affordability, environmental concerns, and the increasing quality of refurbished devices. In 2023, over 310 million refurbished and used mobile phones were sold worldwide, accounting for nearly 23% of total smartphone sales globally.

Approximately 70% of buyers preferred refurbished smartphones over brand-new entry-level models due to better features at lower prices. The average resale price of refurbished phones dropped by 12% between 2022 and 2023, encouraging greater adoption across emerging markets. In North America alone, nearly 69 million used smartphones were sold in 2023, indicating a rise of 8% compared to the previous year. Environmental sustainability also played a role, with refurbished mobile devices contributing to reducing approximately 18 million tons of e-waste annually worldwide. These figures indicate a sustained and growing trend in the refurbished and used mobile phones market across diverse regions and user demographics.

The U.S. refurbished and used mobile phones market has expanded as cost-conscious consumers seek value, with about 120 million pre-owned devices in circulation across major resale channels. Refurbished iPhones represent roughly 40% of units sold, while Android devices account for about 50%, and remaining feature phones fill the rest. Online marketplaces and certified refurbishers together handle nearly 65% of all transactions, with brick-and-mortar trade-in programs contributing around 25%. Popular screen sizes between 6.1–6.7 inches dominate listings, comprising approximately 55% of inventory. Buyers aged 18–34 make up about 48% of purchasers, and unlocked devices represent roughly 60% of available stock.

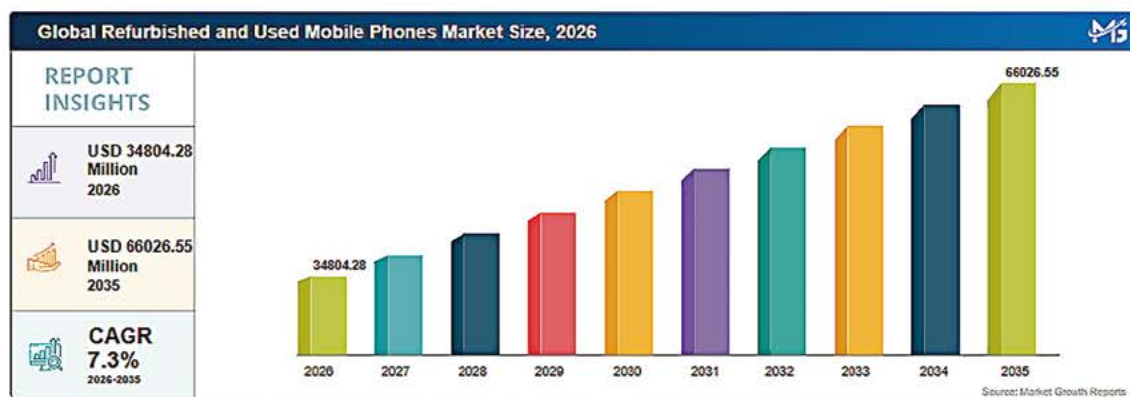

# 翻新及二手手機市場概況

Refurbished and Used Mobile Phones Market Overview

2026年，全球翻新及二手手機市場規模已達到348億428萬美元。展望未來，該市場預計將在2035年達到660億2,655萬美元，在2026至2035年的預測期內呈現7.3%的複合年增長率（CAGR）。

在性價比、環保意識以及翻新裝置品質提升等多重因素的推動下，翻新及二手手機市場實現了快速擴張。2023年，全球翻新及二手手機的銷量超過3.1億部，佔全球智能手機總銷量的近23%。大約有70%的買家相較於全新入門級機型，更傾向選擇翻新智能手機，因為後者能以更低的價格提供更佳的功能。在2022至2023年間，翻新手機的平均轉售價格下降了12%，進一步推動了新興市場的廣泛採用。單是在北美地區，2023年就售出了近6,900萬部二手智能手機，比前一年增長了8%。環境可持續性亦發揮了重要作用，全球翻新手機裝置每年有助減少大約1,800萬噸的電子垃圾。這些數據表明，不同地區和用戶群體對翻新及二手手機市場的需求呈現持續增長的趨勢。

隨着注重成本的消費者開始追求性價比，美國翻新及二手手機市場持續擴大，各大轉售渠道流通的二手裝置約有1.2億部。其中，翻新 iPhone 約佔總銷量的40%，Android 裝置約佔50%，其餘份額則由傳統功能手機填補。線上市場和認證翻新商共同處理了近65%的交易，而實體店的舊機換新（Trade-in）計劃則貢獻了約25%。較受歡迎的 6.1 至 6.7 吋屏幕尺寸主導了產品市場，約佔55%的貨量。18至34歲的買家佔了購買人數的48%左右，而無鎖版（Unlocked）裝置則佔可售存貨的60%左右。

## ➤ Apple joins foldable phone race with \$1,999 passport-shaped iPhone Duo

On September 9, Apple redefined its flagship smartphone with the launch of the Duo, a folding \$1,999 iPhone, betting its design and promises of data privacy will let it leap ahead of rivals who have been selling folding phones for years.

The Duo could shake up a category long dominated by Samsung and Chinese companies like Huawei, whose devices have struggled to move beyond a niche audience. Analysts have long said Apple's entry could be the catalyst foldables need, helping bring the form factor into the mainstream much as the company did with smartwatches and wireless earbuds.

The Duo is sized and shaped like a passport, with rounded edges. It opens into a horizontal, 7.6-inch-diagonal (19 cm) screen that also can be viewed vertically. There is a smaller single screen on the front, when the phone is folded. When open, it is Apple's thinnest phone, the company said. However, it is thicker than folding phones offered by Chinese rivals.

New CEO John Ternus led the event, for the most notable overhaul of Apple's flagship product since the iPhone X in 2017. The iPhone brought in \$209.6 billion, or just over half of Apple's sales, in its most recent fiscal year.

Ternus criticized existing foldables as awkward and poorly suited for common tasks such as scrolling and video viewing, saying the Duo was designed to deliver an iPad-like experience in a pocket-sized device through a custom hinge, dual displays with a consistent aspect ratio, and a new titanium body.

"It's entirely new and at the same time remarkably familiar. A similar size to your passport, it feels familiar to hold

and comfortable to use with one hand," Ternus said.

Other tech companies made light of the launch. Duolingo, the foreign-language learning app with a green owl mascot named Duo, messaged on X, "We infringed upon," with laughing-crying emojis. That drew a message of "solidarity" from foldable phone company Samsung Mobile US, which added, "They copied us, too."

It will fall to Ternus, the previously low-profile hardware chief, to persuade Apple's customers that they need a foldable device costing about \$2,000, a new high for a global brand that has defined mass luxury. Analyst firms such as International Data Corporation expect Apple will sell every foldable iPhone it can produce and secure a 40% share of the lucrative niche by the end of next year.

Apple positioned the iPhone Duo as a business productivity device, showing how it would manage Zoom calls with multiple participants and a broader view of the Slack messaging app. The Duo's larger screen will support multiple app windows at once, a move aimed at productivity that Apple has made with some of its iPads.

Apple said the iPhone Duo, available from October 23, will feature the A20 Pro chip to drive its displays and also a new C2 modem chip designed by Apple, part of its move away from Qualcomm's wireless data chips. Its battery supports 24 hours of mixed dual-screen use and can charge to 50% in about 20 minutes.

"Apple showed up years after everyone else, yet it walks in and sets the rules. Apple entered the foldable market and, in one keynote, set the price and the standard every rival will now be measured against," said Francisco Jeronimo, vice president for Data and Analytics, Devices, at IDC EMEA.

"The real fight is China, where Huawei owns nearly 80% of foldables. Apple has just given Chinese buyers a reason to look up. Huawei owns China's foldable market today. Apple has just handed Chinese buyers their first genuinely

compelling reason to reconsider. Samsung has launched a publicity campaign for its foldable phones, as it seeks to defend its leadership in the segment, which it pioneered in 2019.

"Apple's entry is a serious threat to Samsung, particularly in North America," said Paolo Pescatore, founder of research firm PP Foresight, adding Samsung for the first time faced a competitor capable of taking the category mainstream.

## ➤ **Malaysia telcos suffer 6.6% profit drop in Q2 despite revenue growth**

Malaysia's telecommunications sector reported \$353.8m (RM1.44b) in core net profit in the second quarter (Q2), down 6.6% year on year (YoY) and 19.4% quarter on quarter (QoQ), according to UOB Kay Hian.

The brokerage said strong earnings from Maxis and TIME dotCom offset weaker results from Axiata and Telekom Malaysia (TM).

It said sector earnings came in within expectations, with the quarter marked by 2% YoY service revenue growth, cost discipline, stronger enterprise demand, and robust home fibre demand.

Maxis reported a 9.5% YoY increase in core net profit to \$107.1m (RM436m), whilst TIME's core net profit rose 13.8% to \$31.7m (RM129m). TM's core net profit increased 4.6% to \$99.9m (RM406.4m).

Axiata recorded the steepest decline amongst the major operators, with core net profit falling 74.1% YoY to \$10.4m (RM42.5m), weighed down by lower ringgit-translated earnings and higher withholding tax expenses.

The quarter reflected the impact of mobile price increases introduced in February. CelcomDigi, Maxis, and U

Mobile raised postpaid and prepaid prices by 5% to 10%, driving market-wide service revenue growth.

Maxis' prepaid ARPU increased 1.4% QoQ in Q2, whilst postpaid ARPU rose 0.3%. CelcomDigi's ARPU remained stable.

UOB Kay Hian expects the price increases to support earnings in the third quarter, with Maxis and CelcomDigi positioned to benefit from the higher ARPU.

The brokerage maintained its "market weight" rating on the sector and named the two operators as its top picks.

Enterprise demand also supported the quarter, with TM seeing demand from the public sector. Home fibre demand remained strong, driven by fixed-mobile convergence strategies and the expansion of home passes.

CelcomDigi also reported further synergy savings in Q2. The company recorded \$24.6m (RM100m) in additional savings, bringing cumulative savings to \$34.6m (RM141m) year-to-date.

It raised its 2026 operation expenses and cost of goods sold savings target to \$115.5m (RM470m) from \$113.0m (RM460m), with UOB Kay Hian expecting annual savings to reach between \$172.0m (RM700m) and \$196.6m (RM800m) by 2028.

Digital Nasional (DNB) is also slated for consolidation in the fourth quarter, following the successful refinancing of its \$368.6m (RM1.5b) Ministry of Finance loan.

UOB Kay Hian does not expect DNB losses to materially affect 2026 earnings and said no cash call or capital injection is required for its near-term capex needs.

DNB is projected to post a net loss of \$196.6m (RM800m) in 2026, narrowing to \$98.3m (RM400m) in 2027 as its revenue base doubles and the company expands network capacity and traffic management to meet higher 5G data consumption.

UOB Kay Hian expects the sector to deliver a 5.5% net dividend yield in 2026. It maintained "buy" ratings on Maxis, with a \$1.03 (RM4.20) target price, and CelcomDigi, with a

## ➤ **Vietnam marks end of its 2G network**

The 2G era in Vietnam has ended, marked by the country's 900 MHz frequency band auction earlier this month. After being in use since 1993, the 2G network's final day is 15 September 2026.

According to a report by Vietnam's official investment and economic newspaper, three pairs of 900 MHz frequency bands were auctioned on 9 September. VNPT, Viettel, and Vietnamobile each won a pair.

It was pointed out that, aside from signifying the discontinuation of 2G, the auction also meant the re-allocation of the band for 4G or 5G technology.

Radio Frequency Department Director Le Van Tuan was quoted as saying: "Owning this frequency band is not only a strategic opportunity to expand coverage and effectively deploy 4G/5G networks, but also a significant contribution to the state budget and the sustainable development of the national digital infrastructure."

The Department of Grassroots Information and External Information published an English version of the report, which cited the 100% increase (from 340 MHz in 2020 to last year's 680 MHz) in the amount of bandwidth allocated for mobile in Vietnam.

## ➤ **Gulf, Singtel to build subsea cable between Thailand and Singapore**

Gulf Development and Singtel Group will develop new submarine cable connectivity between Thailand and Singa-

pore as the two companies in a bid to meet rising demand for cloud, AI, data centre and digital services in Southeast Asia.

The partnership will see Gulf and Singtel invest in subsea cable assets, combining Gulf's infrastructure development and digital businesses with Singtel's submarine cable infrastructure expertise.

The first project under the partnership will be the Vietnam-Thailand-Singapore (VTS) Cable System, which will establish a new subsea link between Thailand and Singapore.

Singtel Singapore and Thai associate AIS will support the system's development and commercialisation through their connectivity capabilities and customer networks.

The VTS Cable System is expected to be operational by 2030, with capital requirements spread over several years.

Gulf and Singtel may also explore investments in terrestrial cable systems and other subsea cable projects in the future.

"We are creating a platform that strengthens submarine cable connectivity between Thailand and Singapore while supporting Thailand's ambition to become a leading digital and AI economy in Southeast Asia," said Gulf CEO Sarath Ratanavadi said. "With our complementary strengths, we aim to build critical infrastructure that enables digital growth and creates long-term value for the economies and communities we serve."

"Thailand and Singapore are two of Southeast Asia's most important digital economies," said Yuen Kuan Moon, Group Chief Executive Officer of Singtel, said. "Our partnership with Gulf brings together our expertise in digital infrastructure and submarine cable systems to meet the growing demand for cloud, AI, data centre and digital services."

The partnership builds on Gulf and Singtel Group's existing collaborations in Thailand across telecommunications and data centres.

## 環球資源移動電子展 Global Sources Mobile Electronics Show

歡迎來自世界各地行業人士參與，搶佔機遇，領跑市場！

由香港國際通信電子商貿會（HKICEC）策劃的「全球移動通訊設備商貿館」將於2026年10月18至21日在香港亞洲國際博覽館（5及7號館）與環球資源移動電子展同期舉行。本展區專為全球流動通訊設備與智能配件製造商、品牌及國際買家打造高效的B2B對接平台，旨在推動跨國合作與產業可持續發展。

Organised by HKICEC, the Global Mobile Exchange Pavilion runs concurrently with the Global Sources Mobile Electronics Show from October 18 to 21, 2026, at AsiaWorld-Expo (Halls 5 & 7). This dedicated B2B matchmaking platform connects global mobile communication and smart peripheral manufacturers, brand owners, and international buyers to drive cross-border collaboration and sustainable industry growth.

環球資源移動電子展是全球最大型的電子採購展之一，面積逾70,000平方米，吸引超過50,000名全球專業買家。作為亞洲首個行動與通訊專屬貿易展區，我們打造了精準的B2B商貿對接網絡，高效連結全球買家與頂尖供應商。本展會匯聚業界菁英，為企業兌現商業價值、洞悉前瞻視野及拓展國際版圖的頂尖生態圈。

The Global Sources Mobile Electronics Show is one of the world's largest electronics sourcing exhibitions, spanning 70,000+ sqm and attracting over 50,000 global buyers. As Asia's premier mobile and communications trade zone, it features a precise B2B matchmaking network that seamlessly links buyers with elite suppliers. Gathering industry elite, this exhibition serves as a premier ecosystem for enterprises to realize commercial value, gain visionary insights, and expand their global footprint.

### 聯通全球：HKICEC 使命、願景與發展藍圖 Connecting the Globe: HKICEC Mission, Vision, & Strategy

香港國際通信電子商貿會(HKICEC)成立於2024年12月，旨在發揮香港轉口貿易優勢，搭建交流橋樑，助力會員拓展國際市場與促進設備全球流通。秉持「匯智聚力、通聯全球、賦能產業、回饋社會」之初心，我們積極推動循環經濟與綠色發展，提升行業標準，致力建構創新且可持續的全球移動通訊生態圈。

Founded in December 2024, the Hong Kong International Communication Electronic Chamber (HKICEC) leverages Hong Kong's strengths as a global trading hub to foster international cooperation and optimize worldwide equipment distribution. Guided by our motto "Gather Wisdom And Strength, Empower The Industry, Connect The World, Contribute To Society" we champion the circular economy, elevate industry standards, and drive collaboration to build a sustainable, innovative global mobile ecosystem.
